

An abstract network diagram on a dark blue background. It features a complex web of white lines connecting various nodes. Some nodes are represented by small circles, while others are larger, multi-faceted geometric shapes. A bright, glowing blue light source is positioned on the right side, casting a beam of light across the network. The overall effect is one of dynamic connectivity and data flow.

**Computer Networks and Systems** Thomas G. Robertazzi, 2012-12-06 Statistical performance evaluation has assumed an increasing amount of importance as we seek to design more and more sophisticated communication and information processing systems The ability

to predict a proposed system's performance without actually having to construct it is an extremely cost effective design tool. This book is meant to be a first year graduate level introduction to the field of statistical performance evaluation. As such it covers continuous time queueing theory chapters 1-4, stochastic Petri networks chapter 5, and discrete time queueing theory chapter 6. There is a short appendix at the end of the book that reviews basic probability theory. At Stony Brook this material would be covered in the second half of a two course sequence; the first half is an applied computer networks course. Students seem to be encouraged to pursue the analytical material of this book if they first have some idea of the potential applications.

Evolutionary Optimization Algorithms Dan Simon, 2013-06-13. A clear and lucid bottom up approach to the basic principles of evolutionary algorithms. Evolutionary algorithms (EAs) are a type of artificial intelligence. EAs are motivated by optimization processes that we observe in nature such as natural selection, species migration, bird swarms, human culture, and ant colonies. This book discusses the theory, history, mathematics, and programming of evolutionary optimization algorithms. Featured algorithms include genetic algorithms, genetic programming, ant colony optimization, particle swarm optimization, differential evolution, biogeography based optimization, and many others. Evolutionary Optimization Algorithms Provides a straightforward bottom up approach that assists the reader in obtaining a clear but theoretically rigorous understanding of evolutionary algorithms with an emphasis on implementation. Gives a careful treatment of recently developed EAs including opposition based learning, artificial fish swarms, bacterial foraging, and many others, and discusses their similarities and differences from more well established EAs. Includes chapter end problems plus a solutions manual available online for instructors. Offers simple examples that provide the reader with an intuitive understanding of the theory. Features source code for the examples available on the author's website. Provides advanced mathematical techniques for analyzing EAs including Markov modeling and dynamic system modeling.
