Review of Progress in Quantitative Nondestructive Evaluation Donald O. Thompson, Dale E. Chimenti, 2012-12-06 In this volume parts 1 and 2 are contained the edited papers presented at the annual Review of Progress in Quantitative NDE held at the University of California San Diego August 1 6 1982 This Review possibly the most comprehensive annual symposium emphasizing both ongoing research and applications in quantitative NDE was sponsored by the Center for Advanced NDE at the Ames Laboratory of the U S Department of Energy in cooperation with the Materials Laboratory of the Air Force Wright Aeronautical Laboratories and the Defense Advanced Research Projects Agency Over 300 attendees representing various

government agencies and the industrial and university communities participated in the technical presentations poster sessions and discussions The symposium benefited from the insight of two keynote speakers Dr Harris Burte of the Materials Laboratory AFWAL and Mr Ward Rummel of the Martin Marietta Corporation who presented complementary messages Dr Burte pointed out the need to identify windows to serve as guides for focusing NDE research The window concept may be thought of as an opportunity for the application of NDE technology to an important problem and through this application to identify knowledge gaps which must be filled by generic research This concept simultaneously provides a mechanism for the solution of a direct application problem and a set of strong guidelines for generic research directions Mr Rummel called attention to the value of lessons learned from various

Engineering and Managing Software Requirements Aybuke Aurum, Claes Wohlin, 2006-04-07 Requirements engineering is the process by which the requirements for software systems are gathered analyzed documented and managed throughout their complete lifecycle Traditionally it has been concerned with technical goals for functions of and constraints on software systems Aurum and Wohlin however argue that it is no longer appropriate for software systems professionals to focus only on functional and non functional aspects of the intended system and to somehow assume that organizational context and needs are outside their remit Instead they call for a broader perspective in order to gain a better understanding of the interdependencies between enterprise stakeholders processes and software systems which would in turn give rise to more appropriate techniques and higher quality systems Following an introductory chapter that provides an exploration of key issues in requirements engineering the book is organized in three parts Part 1 presents surveys of state of the art requirements engineering process research along with critical assessments of existing models frameworks and techniques Part 2 addresses key areas in requirements engineering such as market driven requirements engineering goal modeling requirements ambiguity and others Part 3 concludes the book with articles that present empirical evidence and experiences from practices in industrial projects Its broader perspective gives this book its distinct appeal and makes it of interest to both researchers and practitioners not only in software engineering but also in other disciplines such as business process engineering and management science
