what's expected as the book goes deeper into Sass and Compass. Next you will learn CSS and HTML concepts that are vital to a good Sass workflow. After all, Sass exists to simplify writing CSS, but it won't teach you how to make clean, scalable, reusable CSS. For that, you need to understand some basic concepts of OOCSS, SMACSS, and Atomic Design. Once you've brushed up on the important concepts, it's time to write some Sass. Mainly, you'll write a few functions and mixins that really leverage control flow using if/else loops, and you'll learn how to figure out when and why things are going wrong before they bring you to a stop. Moving further, you'll learn how to use `debug`, `warn`, and `error` to properly handle errors. You'll also learn about Gulp and how to use it to automate your workflow and reduce your repetitive tasks. And finally, you'll learn about sourcemaps. With sourcemaps, you'll be able to write, debug, and view your Sass and Compass all from within the browser. It'll even LiveReload too. As a bonus, you'll take a look at that funky Flexbox, currently all the rage. You'll learn how powerful and flexible it really is and how you can use it with Compass. Best of all, it falls back very gracefully, indeed. In fact, you'll be able to apply it to any existing project without having to change a line of the original CSS. Style and approach: This book will provide readers with practical, actionable expertise to enhance their knowledge.

**Short-Term Bioassays in the Analysis of Complex Environmental Mixtures III** Michael D. Waters,2012-12-06 In the four years since the 1978 Symposium on the Application of Short Term Bioassays in the Fractionation and Analysis of Complex Environmental Mixtures the use of short term bioassays to evaluate potential health hazards of complex environmental mixtures has substantially increased Increased research activity has been particularly noticeable in mobile source emissions where initial observations on the mutagenic activity of diesel particulate extracts reported at the 1978 symposium stimulated the development of major research programs in government and industry In the absence of appropriate reference materials the U S Environmental Protection Agency initiated comparative genotoxicity studies to determine the relative mutagenic and carcinogenic activity and ultimately the potential human health risk due to exposure to various complex emission products Among the materials investigated were those of known health risk such as coke oven and roofing tar emissions and cigarette smoke condensates and those of unknown hazard such as exhaust from diesel and gasoline powered vehicles Studies on diesel emission products proved useful in short term bioassay development as the diesel exhaust extracts were genetically active with low cellular toxicity and could be obtained in relatively large quantities Availability of such samples aided chemical characterization and it was eventually determined that the nitro polynuclear aromatic hydrocarbons were among the mutagenic components of diesel exhaust particulate
