The Answers Lie Within Us Alistair Sinclair, 2017-07-05 This book suggests that religion in its usual sense can be replaced by something better that the human spirit or subjectivity can be the subject of scientific study and that lack of purpose or design in the universe is not a handicap but a positive opportunity for intelligent beings to make of the universe and its contents what they reasonably can. The book breaks new ground in suggesting a radical alternative to religion. It offers a scientific and humanist alternative to religion which appeals to people's critical faculties rather than emotions or intuitions. It also challenges current views of causation and the principle of sufficient reason by stressing the subjectivity of our reasoning powers and clarifying these in relation to an independent external reality. It develops and elaborates a notion of the noosphere within a theoretical system; this enables the notion to assume a scientific importance which it currently lacks because it is treated as an isolated, eccentric, and rather mystical idea

[The World's Religions](#) Ninian Smart, 1998-06-28 *The World's Religions* offers a fascinating insight into a wide range of faiths, their history, and their followers. In the richly illustrated new edition of this popular book, religions are described through their symbols, rituals, followers, architecture, and art. References, statistics, maps, and pictures have been updated and added. The text has been thoroughly revised to highlight recent developments, such as the spread of Islam, African American and Hispanic American religious experience, and women priests

Handbook of Spatial Point-Pattern Analysis in Ecology Thorsten Wiegand, Kirk A. Moloney, 2013-12-20 Understand How to Analyze and Interpret Information in Ecological Point Patterns. Although numerous statistical methods for analyzing spatial point patterns have been available for several decades, they haven't been extensively applied in an ecological context. Addressing this gap, *Handbook of Spatial Point Pattern Analysis in Ecology* shows how the techniques of point pattern analysis are useful for tackling ecological problems. Within an ecological framework, the book guides readers through a variety of methods for different data types and aids in the interpretation of the results obtained by point pattern analysis. Ideal for empirical ecologists who want to avoid advanced theoretical literature, the book covers statistical techniques for analyzing and

interpreting the information contained in ecological patterns It presents methods used to extract information hidden in spatial point pattern data that may point to the underlying processes The authors focus on point processes and null models that have proven their immediate utility for broad ecological applications such as cluster processes Along with the techniques the handbook provides a comprehensive selection of real world examples Most of the examples are analyzed using Programita a continuously updated software package based on the authors many years of teaching and collaborative research in ecological point pattern analysis Programita is tailored to meet the needs of real world applications in ecology The software and a manual are available online

The result is the first published version of *Heart of Darkness* that allows readers to hear Marlow's voice as Conrad heard it when he wrote the story. *Backgrounds and Contexts* provides readers with a generous collection of maps and photographs that bring the Belgian Congo to life. Textual materials topically arranged address nineteenth-century views of imperialism and racism and include autobiographical writings by Conrad on his life in the Congo. New to the Fourth Edition is an excerpt from Adam Hochschild's recent book *King Leopold's Ghost*, as well as writings on race by Hegel, Darwin, and Galton. Criticism includes a wealth of new materials, including nine contemporary reviews and assessments of Conrad and *Heart of Darkness* and twelve recent essays by Chinua Achebe, Peter Brooks, Daphne Erdinast, Vulcan, Edward Said, and Paul B. Armstrong, among others. Also new to this edition is a section of writings on the connections between *Heart of Darkness* and the film *Apocalypse Now* by Louis K. Greiff. Margot Norris and Lynda J. An Introduction to the Theory of Point Processes D.J. Daley, D. Vere-Jones, 2003-11-14. Point processes and random measures find wide applicability in telecommunications, earthquakes, image analysis, spatial point patterns, and stereology, to name but a few areas. The authors have made a major reshaping of their work in their first edition of 1988 and now present their *Introduction to the Theory of Point Processes* in two volumes with sub-titles *Elementary Theory and Models* and *General Theory and Structure*. Volume One contains the introductory chapters from the first edition together with an informal treatment of some of the later material intended to make it more accessible to readers primarily interested in models and applications. The main new material in this volume relates to marked point processes and to processes evolving in time where the conditional intensity methodology provides a

basis for model building inference and prediction There are abundant examples whose purpose is both didactic and to illustrate further applications of the ideas and models that are the main substance of the text
