Legal Research: How to Find and Understand the Law Suzanne McKie,1993-11-16 Legal research comes in many forms and legal researchers have a myriad of faces. Recognising these two obvious facts this book has been designed to be a flexible tool of use to researchers of various levels of sophistication. If you are new to legal research start with Chapter 2 and work your way through the book.

Multimedia Information Retrieval Peter Schäuble,2012-12-06 *Multimedia Information Retrieval* Content Based Information Retrieval from Large Text and Audio Databases addresses the future need for sophisticated search techniques that will be required to find relevant information in large digital data repositories such as digital libraries and other multimedia databases. Because of the dramatically increasing amount of multimedia data available there is a growing need for new search techniques that provide not only fewer bits but also the most relevant bits to those searching for multimedia digital data. This book serves to bridge the gap between classic ranking of text documents and modern information retrieval where composite multimedia documents are searched for relevant information. *Multimedia Information Retrieval* Content Based Information Retrieval from Large Text and Audio Databases begins to pave the way for speech retrieval only recently has the search for information in speech recordings become feasible. This book provides the necessary introduction to speech recognition while discussing probabilistic retrieval and text retrieval. Key topics in classic information retrieval. The book then discusses speech retrieval which is even more challenging than retrieving text documents because word boundaries are difficult to detect and recognition errors affect the retrieval effectiveness. This book also addresses the problem of integrating information retrieval and database functions since there is an increasing need for retrieving information from frequently changing data collections which are organized and managed by a database system. *Multimedia Information Retrieval* Content Based Information Retrieval from Large Text and Audio Databases serves as an excellent reference source and may be used as a text for advanced courses on the topic.

The Digital Document Bruce Duyshart,2013-02-01 Documents such as drawings, memos and specifications form an essential function in the design and construction industry. Throughout the lifecycle of a built asset starting from an initial design idea right through to a final built form and its ongoing management thousands even millions of documents can be used to convey various forms of information to a range of interested parties. In many ways therefore the success of a design or construction based company relies upon an understanding of the use of documents as well as the technologies and techniques that are used to create them. *The Digital Document* provides an extensive background to the issues and technologies surrounding this very important topic. It examines a technical subject in an insightful manner that is neither intimidating nor confusing even to the novice computer user. By introducing the subject through a series of preliminary reviews of current practices and essential computing technologies the reader is able to better appreciate the benefits and capabilities of a wide range of digital document types.

This book explores the role of documents in a professional practice examines the components capabilities viability and use of digital documents in the design and construction industry and identifies and explains many of the standards in use today In order to facilitate a better understanding of digital document technologies a number of essential reviews are provided including the definition and purpose of a document how documents are typically used by design professionals the nature of the digital document environment the data types which make up digital documents The Digital Document is an essential reference for the architect engineer or design professional that wants to find out more about effective communication in the digital workplace Bruce Duyshart is an IT Project Manager with Lend Lease Corporation and specialises in the development and implementation of digital media and information management technologies on design and construction projects He holds a Masters degree in Architecture and is also an academic associate of the Faculty of Architecture Building and Planning at the University of Melbourne He has written numerous papers on emerging technologies in the architecture engineering and construction industry and has developed Internet web sites for the Royal Australian Institute of Architects and Architecture Media

Biologically Inspired Approaches to Advanced Information Technology Auke Jan Ijspeert, Masayuki Murata, Naoki Wakamiya, 2004-10-11 The evolution of the Internet has led us to the new era of the information infrastructure As the information systems operating on the Internet are getting larger and more complicated it is clear that the traditional approaches based on centralized mechanisms are no longer meaningful One typical example can be found in the recent growing interest in a P2P peer to peer computing paradigm It is quite different from the Web based client server systems which adopt essentially centralized management mechanisms The P2P computing environment has the potential to overcome bottlenecks in Web computing paradigm but it introduces another difficulty a scalability problem in terms of information found if we use a brute force flooding mechanism As such conventional information systems have been designed in a centralized fashion As the Internet is deployed on a world scale however the information systems have been growing and it becomes more and more difficult to ensure fault free operation This has long been a fundamental research topic in the field A complex information system is becoming more than we can manage For these reasons there has recently been a significant increase in interest in biologically inspired approaches to designing future information systems that can be managed efficiently and correctly
