 management blending the latest thinking with state of the art industry practice on how organizations can learn from mistakes
 Even today the reality of error management in some organizations is simple Don't make mistakes And if you do you're on
 your own unless you can blame someone else In most it has moved on but it is still often centered around quality control with
 Six Sigma Black Belts seeking to eradicate errors with an unattainable goal of zero But the best organizations have gone
 further They understand that mistakes happen be they systemic or human They have realized that rather than being
 stigmatized errors have to be openly discussed analyzed and used as a source for learning In How Could This Happen Jan
 Hagen collects insights from the leading academics in this field covering the prerequisites for error reporting such as
 psychological safety organizational learning and innovation safety management systems and the influence of senior
 leadership behavior on the reporting climate This research is complemented by contributions from practitioners who write
 about their professional experiences of error management They provide not only ideas for implementation but also offer an
 inside view of highly demanding work environments such as flight operations in the military and operating nuclear

submarines Every organization makes mistakes Not every organization learns from them It s the job of leaders to create the culture and processes that enable that to happen Hagen and his team show you how *Official Gazette of the United States Patent and Trademark Office* United States.
