Analog and Digital Communication S. Rameshbabu, Dr. S. Prabhakar Rao, J. Sunilkumar, Saheb Goud Karaddi, 2022-08-04 An introductory course on analog and digital communications is fundamental to the undergraduate program in electrical engineering. This course is usually offered at the junior level. Typically, it is assumed that the student has a background in calculus, electronics, signals, and systems, and possibly probability theory. Bearing in mind the introductory nature of this course, a textbook recommended

for the course must be easy to read accurate and contain an abundance of insightful examples problems and computer experiments These objectives of the book are needed to expedite learning the fundamentals of communication systems at an introductory level and in an effective manner This book has been written with all of these objectives in mind Given the mathematical nature of communication theory it is rather easy for the reader to lose sight of the practical side of communication systems Throughout the book we have made a special effort not to fall into this trap We have done this by moving through the treatment of the subject in an orderly manner always trying to keep the mathematical treatment at an easy to grasp level and also pointing out practical relevance of the theory wherever it is appropriate to do so

Electronic Communication in Heterometallated Porphyrin Oligomers Jonathan Cremers,2020-02-13 This book cuts across the divisions of organic inorganic and physical chemistry It describes new methods for creating conjugated porphyrin oligomers with precisely defined sequences of zinc and copper metal cations and how EPR spectroscopy was used to investigate the dipolar and exchange coupling between the paramagnetic copper II centres Porphyrins are a group of heterocyclic macrocycle organic compounds that play an important role in our everyday life and can for example be found in blood where they form a red complex with iron haem Various metallic elements can be inserted into a porphyrin and changing the coordinated metal is an excellent way to influence the chemical and physical properties of these molecules Focusing on 3 metals zinc magnesium and copper the author established new methods for creating conjugated porphyrin oligomers and lastly presents the synthesis and investigation of two novel porphyrin nanoballs Giving the template directed strategy the author developed for constructing these molecules this work could provide access to other related nano cages

Tactical Communications for the Digitized Battlefield Michael J. Ryan,Michael R. Frater,2002 Traditional tactical communications systems consist of a number of separate subsystems with little interworking between them and with external sensors and weapons systems Combat net radio CNR has provided the high mobility communications required by combat troops while trunk communications systems have provided high capacity communications between headquarters at the expense of mobility The focus of this book is on new information age technologies that promise to offer seamless integration of real time data sharing creating a single logical network architecture to facilitate the movement of data throughout the battlespace Because the structure of this network is constrained by the fundamental trade off between range mobility and capacity that applies to all communications systems this network is unlikely to be based on a single network technology This

book presents an architecture for this network and shows how its subsystems can be integrated to form a single logical network

The Digital Humanist Domenico Fiormonte, Teresa Numerico, Francesca Tomasi, 2015 This book offers a critical introduction to the core technologies underlying the Internet from a humanistic perspective It provides a cultural critique of computing technologies by exploring the history of computing and examining issues related to writing representing archiving and searching The book raises awareness of and calls for the digital humanities to address the challenges posed by the linguistic and cultural divides in computing the clash between communication and control and the biases inherent in networked technologies A common problem with publications in the Digital Humanities is the dominance of the Anglo American perspective While seeking to take a broader view the book attempts to show how cultural bias can become an obstacle to innovation both in the methodology and practice of the Digital Humanities Its central point is that no technological instrument is culturally unbiased and that all too often the geography that underlies technology coincides with the social and economic interests of its producers The alternative proposed in the book is one of a world in which variation contamination and decentralization are essential instruments for the production and transmission of digital knowledge It is thus necessary not only to have spaces where DH scholars can interact such as international conferences THATCamps forums and mailing lists but also a genuine sharing of technological know how and experience This is a truly exceptional work on the subject of the digital Students and scholars new to the field of digital humanities will find in this book a gentle introduction to the field which I cannot but think would be good and perhaps even inspirational for them Its history of the development of machines and programs and communities bent on using computers to advance science and research merely sets the stage for an insightful analysis of the role of the digital in the way both scholars and everyday people communicate and conceive of themselves and others in written forms from treatises to credit card transactions Peter Shillingsburg The Digital Humanist is not simply a translation of the Italian book *L'umanista digitale* il Mulino 2010 but a new version tailored to an international audience through the improvement and expansion of the sections on social cultural and ethical problems of the most widely used methodologies resources and applications
