

Types of Bonds

Look at the Bohr Models below, move the electrons from one model to the other as they would if these two atoms formed a bond.

After moving the electrons.
How many Protons ____ +
How many Electrons ____ -
What is the difference ____
(include sign)

After moving the electrons.
How many Protons ____ +
How many Electrons ____ -
What is the difference ____

- If atom A loses electrons to atom B,
 - how many electrons will atom A lose? _____
 - how many electrons will atom B gain? _____
 - what will be the oxidation number of atom A? _____ (include sign)
 - what will be the oxidation number of atom B? _____ (include sign)
 - what will be the total charge of the compound formed? Number format.

f. what type of bond will form?

- Explain why an element's oxidation number is related to the group on the periodic table to which it belongs.

For Families 1, 2, 3, and 4 the oxidation number is _____

For Families 5, 6, 7, and 8 the oxidation number is _____

Directions: Complete the table comparing ionic compounds and covalent compounds.

Characteristic	Ionic compounds	Covalent compounds
3. How the compound is formed	electrons are shared electrons are transferred	electrons are shared electrons are transferred
4. Smallest particle	proton, neutron, electron	proton, neutron, electron
5. Usual state at room temperature	Solid, Liquid, Gas	Solid, Liquid, Gas

Ebook: Physical Science Tillery, 2016-04-16 Ebook Physical Science **Survey of Semiconductor Physics** Karl W. Böer, 2012-12-06 Any book that covers a large variety of subjects and is written by one author lacks by necessity the depth provided by an expert in his or her own field of specialization This book is no exception It has been written with the encouragement of my students and colleagues who felt that an extensive card file I had accumulated over the years of teaching solid state and semiconductor physics would be helpful to more than just a few of us This file updated from time to time contained lecture notes and other entries that were useful in my research and permitted me to give to my students a broader spectrum of information than is available in typical textbooks When assembling this material into a book I divided the topics into material dealing with the homogeneous semiconductor the subject of the previously published Volume 1 and the inhomogeneous semiconductor the subject of this Volume 2 In order to keep the book to a manageable size sections of tutorial character which can be used as text for a graduate level class had to be interwoven with others written in shorter reference style The pointers at the right hand page header will assist in distinguishing the more difficult reference parts of the book with the pointer to the right from the more easy to read basic educational sections with the pointer tending to the left Survey of Semiconductor Physics Karl Wolfgang Böer, 1990 Taking up where the first volume left off this work provides coverage of the inhomogeneous semiconductor It deals mainly with Si and GaAs but also investigates other materials of theoretical and practical interest such as Ge other III V and II VI compounds and amorphous SiH Equipped with this source physicists semiconductor engineers device engineers and fabrication engineers will have access to a vast reservoir of practical information on the design production and operations of semiconductor devices Physical Chemistry for the Life Sciences Thomas Engel, Gary Drobný, Philip J. Reid, 2008 KEY BENEFIT Physical Chemistry for the Life Sciences presents the core concepts of physical chemistry with mathematical rigor and conceptual clarity and develops the modern biological applications alongside the physical principles The traditional presentations of physical chemistry are augmented with material that makes these chemical ideas biologically relevant applying physical principles to the understanding of the complex problems of 21st century biology KEY TOPICS Physical Chemistry Biology MARKET For all readers interested in physical chemistry and biology **Physical Science - Chemistry Split with Online Learning Center Password Card (Chapters 1 And 8 - 13)** Bill W. Norton, Johan B Ubbink, 2009-07-21 Industrialists developing new food and pharmaceutical products face the challenge of innovation in an increasingly competitive market that must consider ingredient cost product added value expectations of a healthy life style improved sensory impact controlled delivery of active compounds and last but not least product stability While much work has been done to explore understand and address these issues a gap has emerged between recent advances in fundamental knowledge and its direct application to product situations

with a growing need for scientific input Modern Biopolymer Science matches science to application by first acknowledging the differing viewpoints between those working with low solids and those working with high solids and then sharing the expertise of those two camps under a unified framework of materials science Real world utilisation of fundamental science to achieve breakthroughs in product development Includes a wide range of related aspects of low and high solids systems for foods and pharmaceuticals Covers more than bio olymer science in foods by including biopolymer interactions with bioactive compounds issues of importance in drug delivery and medicinal chemistry
