Vieux, 2016-08-19 This book presents a unified approach for modeling hydrologic processes distributed in space and time using geographic information systems GIS This Third Edition focuses on the principles of implementing a distributed model using geospatial data to simulate hydrologic processes in urban rural and peri urban watersheds The author describes fully distributed representations of hydrologic processes where physics is the basis for modeling and geospatial data forms the cornerstone of parameter and process representation A physics based approach involves conservation laws that govern the movement of water ranging from precipitation over a river basin to flow in a river Global geospatial data have become readily available in GIS format and a modeling approach that can utilize this data for hydrology offers numerous possibilities GIS data formats spatial interpolation and resolution have important effects on the hydrologic simulation of the major hydrologic components of a watershed and the book provides examples illustrating how to represent a watershed with spatially distributed data along with the many pitfalls inherent in such an undertaking Since the First and Second Editions software development and applications have created a richer set of examples and a deeper understanding of how to perform distributed hydrologic analysis and prediction This Third Edition describes the development of geospatial data for use in Vflo physics based distributed modeling Technical Bulletin, 1973 **Functional Assessment of Wetlands** E. Maltby, 2009-04-27 Wetlands perform functions that deliver benefits to society often referred to as ecosystem services These ecosystem services include water supply flood regulation water purification climate regulation biodiversity agriculture e g grazing land and amenity A functional approach to wetland assessment enables a holistic view to be taken of the wide range of services wetlands can provide The functional assessment procedures FAPs in this volume translate best available scientific knowledge into reasonable predictions of how component parts of wetlands function in different landscape contexts They can be used to indicate the potential and priorities for management options in such areas as flood control pollution reduction and biodiversity conservation Functional assessment enables the user to predict the functioning of a wetland area without the need for comprehensive and expensive empirical research The FAPs therefore provide a methodology that can be used by both experts and non experts to assess wetland functioning relatively rapidly The volume includes an electronic version of the FAPs on CD which automates aspects of the assessment once the initial recording stage is completed It is anticipated that the FAPs will be used by a range of individuals or organisations concerned with wetland management who wish to gain a better understanding of the processes functions services or benefits and potential of the wetlands for which they have responsibility Provides a systematic methodology to evaluate how wetlands function Allows non experts to assess wetland functioning rapidly and cost effectively Automates aspects of the functional assessment through the accompanying CD ROM
