

Elementary Probability Theory.

Probability

Probability is the chance that something will happen-how likely it is that some event will happen.

Measurement of Probability:

There are three approaches to construct a measure of probability of occurrence of an event. They are:

① Classical or Mathematical Approach.

Probability is defined as the ratio of favourable event to the total number of equally likely event. If a trial result in n exhaustive, mutually exclusive, equally likely and independent outcomes and 'm' of them are favourable for happening of the event E. Then the probability P of occurrence of the event E is given by.

$$P(E) = \frac{\text{Number of outcomes favourable to event E}}{\text{Total number of outcomes.}}$$
$$= \frac{m}{n}.$$
