Semiconductor Physics Karlheinz Seeger, 2013-03-09 This book now in its ninth edition still has the character of a textbook with the emphasis on Physics The volume has increased somewhat because several improvements have been made and some new items have been included In Sect 13 2 the new Quantum Cascade Laser which covers the far infrared spectral range has been added In Sect 14 4 the theory of the quantum Hall effect is now based on ballistic transport which in a more general respect without referring to the then still unknown quantum Hall effect was considered already by Rudolf Peierls In the same chapter the recent discovery of a low temperature resistance oscillation in a very pure semiconductor under the influence of combined dc and ac electric fields in addition to a magnetic field is presented Furthermore quantum Hall effect observations with an unprecedented high precision are remarkable and may give a new impetus to theory A new Sect 15 5 presents information about coaxial carbon tubes of nanometer size diameter and how they are integrated as the current transporting element in a field effect transistor In another new addition Sect 15 6 with the title Molecular Electronics the current voltage rectifying characteristics of an organic Langmuir Blodgett film of nanometer thickness is shown These efforts serve to demonstrate where the ever decreasing size of electronic circuits may come to its natural limits The system of units preferred here is the SI system
