Industrial Chemical Separation Timothy C. Frank, Bruce S. Holden, 2023-08-07 A fresh new treatment written by industry insiders this work gives readers a remarkably clear view into the world of chemical separation The authors review distillation extraction adsorption crystallization and the use of membranes providing historical perspective explaining key features and offering insights from personal experience

The book is for engineers and chemists with current or future responsibility for chemical separation on a commercial scale in its design operation or improvement or for anyone wanting to learn more about chemical separation from an industrial point of view The result is a compelling survey of popular technologies and the profession one that brings the art and craft of chemical separation to life Ever wonder how popular separation technologies came about how a particular process functions or how mass transfer units differ from theoretical stages Or perhaps you want some pointers on how to begin solving a separation problem You will find clear explanations and valuable insights into these and other aspects of industrial practice in this refreshing new survey **Structural Analysis using Computational Chemistry** Norma-Aurea

Rangel-Vázquez,2022-09-01 Computational chemistry is a science that allows researchers to study characterize and predict the structure and stability of chemical systems In other words studying energy differences between different states to explain spectroscopic properties and reaction mechanisms at the atomic level This field is gaining in relevance and strength due to field applications from chemical engineering electrical engineering electronics biomedicine biology materials science to name but a few Structural Analysis using Computational Chemistry arises from the need to present the progress of computational chemistry in various application areas Technical topics discussed in the book include Quantum mechanics and structural molecular study AM1 Application of quantum models in molecular analysis Molecular analysis of insulin through controlled adsorption in hydrogels based on chitosan Analysis and molecular characterization of organic materials for application in solar cells Determination of thermodynamic properties of ionic liquids through molecular simulation
