Firms' Environmental Performance and the COVID-19 Crisis Pierre Guérin,Felix Suntheim,2021-03-19 The shutdown in economic activity due to the coronavirus disease COVID 19 crisis has resulted in a short term decline in global carbon emissions but the long term impact of the pandemic on the transition to a low carbon economy is uncertain Looking at previous episodes of financial and economic stress to draw implications for the current crisis we find that tighter financial constraints and adverse economic conditions are generally detrimental to firms environmental performance reducing green investments The COVID 19 crisis could thus potentially slow down the transition to a low carbon economy In light of the urgent need to reduce global greenhouse gas emissions these findings underline the importance of climate policies and green recovery packages to boost green investment and support the energy transition Policies that support the sustainable finance sector such as improved transparency and standardization could further help mobilize green investments **Report summaries** United States.
