Problems Chapter 1

1. (a) By the generalized basic principle of counting there are
$$26 \cdot 26 \cdot 10 \cdot 10 \cdot 10 \cdot 10 \cdot 10 = 67,600,000$$
(b) $26 \cdot 25 \cdot 10 \cdot 9 \cdot 8 \cdot 7 \cdot 6 = 19,656,000$
2. $6^4 = 1296$
3. An assignment is a sequence i_1, \dots, i_{20} where i_j is the job to which person j is assigned. Since only one person can be assigned to a job, it follows that the sequence is a permutation of the numbers $1, \dots, 20$ and so there are $20!$ different possible assignments.
4. There are $4!$ possible arrangements. By assigning instruments to Jay, Jack, John and Jim, in that order, we see by the generalized basic principle that there are $2 \cdot 1 \cdot 2 \cdot 1 = 4$ possibilities.
5. There were $8 \cdot 2 \cdot 9 = 144$ possible codes. There were $1 \cdot 2 \cdot 9 = 18$ that started with a 4.
6. Each kitten can be identified by a code number i, j, k, l where each of i, j, k, l is any of the numbers from 1 to 7. The number i represents which wife is carrying the kitten, j then represents which of that wife's 7 sacks contain the kitten; k represents which of the 7 cats in sack j of wife i is the mother of the kitten; and l represents the number of the kitten of cat k in sack j of wife i . By the generalized principle there are thus $7 \cdot 7 \cdot 7 \cdot 7 = 2401$ kittens.
7. (a) $6! = 720$
(b) $2 \cdot 3! \cdot 3! = 72$
(c) $4!3! = 144$
(d) $6 \cdot 3 \cdot 2 \cdot 2 \cdot 1 \cdot 1 = 72$
8. (a) $5! = 120$
(b) $\frac{7!}{2!2!} = 1260$
(c) $\frac{11!}{4!4!2!} = 34,650$
(d) $\frac{7!}{2!2!} = 1260$
9. $\frac{(12)!}{6!4!} = 27,720$

macromolecules and organized molecular assemblies. Importantly, the book develops and applies these principles to supramolecular assemblies and supramolecular machines with many examples from biology and nanoscience. In this way, the book helps the student to see the frontier of modern physical chemistry developments. The book begins with a discussion of wave particle duality and proceeds systematically to more complex chemical systems in order to relate the story of physical chemistry in an intellectually coherent manner. The topics are organized to correspond with those typically given in each of a two course semester sequence. The first 13 chapters present quantum mechanics and spectroscopy to describe and predict the structure of matter, atoms, molecules, and solids. Chapters 14 to 29 present statistical thermodynamics and kinetics and apply their principles to understanding equilibria, chemical transformations, macromolecular properties, and supramolecular machines. Each chapter of the book begins with a simplified view of a topic and evolves to more rigorous description in order to provide the student and instructor flexibility to choose the level of rigor and detail that suits them best. The textbook treats important new directions in physical chemistry research, including chapters on macromolecules, principles of interfaces and films for organizing matter, and supramolecular machines, as well as including discussions of modern nanoscience spectroscopy and reaction dynamics throughout the text.

Probability Robert P. Dobrow, 2013-10-16 An introduction to probability at the undergraduate level. Chance and randomness are encountered on a daily basis. Authored by a highly qualified professor in the field, *Probability With Applications and R* delves into the theories and applications essential to obtaining a thorough understanding of probability. With real life examples and thoughtful exercises from fields as diverse as biology, computer science, cryptology, ecology, public health, and sports, the book is accessible for a variety of readers. The book's emphasis on simulation through the use of the popular R software language clarifies and illustrates key computational and theoretical results. *Probability With Applications and R* helps readers develop problem solving skills and delivers an appropriate mix of theory and application. The book includes chapters covering first principles, conditional probability, independent trials, random variables, discrete distributions, continuous probability, continuous distributions, conditional distribution, and limits. An early introduction to random variables and Monte Carlo simulation and an emphasis on conditional probability conditioning and developing probabilistic intuition. An R tutorial with example script files. Many classic and historical problems of probability as well as nontraditional material such as Benford's law, power law distributions, and Bayesian statistics. A topics section with suitable material for projects and explorations such as random walk on graphs, Markov chains, and Markov chain Monte Carlo. Chapter by chapter summaries and hundreds of practical exercises. *Probability With Applications and R* is an ideal text for a beginning course in probability at the undergraduate level.
