Stephen Thomas Ziliak, Deirdre Nansen McCloskey, 2008-02-19 How the most important statistical method used in many of the sciences doesn't pass the test for basic common sense **An Information Theoretic Approach to Econometrics**

George G. Judge, Ron C. Mittelhammer, 2011-12-12 This book is intended to provide the reader with a firm conceptual and empirical understanding of basic information theoretic econometric models and methods Because most data are observational practitioners work with indirect noisy observations and ill posed econometric models in the form of stochastic inverse problems Consequently traditional econometric methods in many cases are not applicable for answering many of the quantitative questions that analysts wish to ask After initial chapters deal with parametric and semiparametric linear probability models the focus turns to solving nonparametric stochastic inverse problems In succeeding chapters a family of power divergence measure likelihood functions are introduced for a range of traditional and nontraditional econometric model problems Finally within either an empirical maximum likelihood or loss context Ron C Mittelhammer and George G Judge suggest a basis for choosing a member of the divergence family **Statistics Applied with the R Commander** Franz

Kronthaler, 2024-09-03 This book shows you how to analyze data sets systematically and to use the R Commander to extract information from data almost effortlessly Both are not an art The statistical methods are presented and discussed using a single data set This makes it clear how the methods build on each other and gradually more and more information can be extracted from the data R and the R Commander functions used are explained in detail the procedure can be easily transferred to other data sets The book thus provides a simple introduction to professional and free statistical software Various didactic elements facilitate orientation and working with the book At the checkpoints the most important aspects from each chapter are briefly summarized In the freak knowledge section more advanced aspects are addressed to whet the appetite for more All examples are calculated with hand and the R Commander Numerous applications and solutions as well as further data sets are available on the author's internet platform This book is a translation of the original German 2nd edition Statistik angewandt mit dem R Commander by Franz Kronthaler published by Springer Verlag GmbH Germany part of Springer Nature in 2021 The translation was done with the help of artificial intelligence machine translation by the service DeepL.com A subsequent human revision was done primarily in terms of content so that the book will read stylistically

differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors **Maximum Entropy and Bayesian Methods**

W.T. Grandy Jr., L.H. Schick, 2012-12-06 The 10th International Workshop on Maximum Entropy and Bayesian Methods MaxEnt 90 was held in Laramie Wyoming from 30 July to 3 August 1990 This volume contains the scientific presentations given at that meeting This series of workshops originated in Laramie in 1981 where the first three of what were to become annual workshops were held The fourth meeting was held in Calgary the fifth in Laramie the sixth and seventh in Seattle the eighth in Cambridge England and the ninth at Hanover New Hampshire It is most appropriate that the tenth workshop occurring in the centennial year of Wyoming's statehood was once again held in Laramie The original purpose of these workshops was twofold The first was to bring together workers from diverse fields of scientific research who individually had been using either some form of the maximum entropy method for treating ill posed problems or the more general Bayesian analysis but who because of the narrow focus that intra disciplinary work tends to impose upon most of us might be unaware of progress being made by others using these same techniques in other areas The second was to introduce to those who were somewhat aware of maximum entropy and Bayesian analysis and wanted to learn more the foundations the gestalt and the power of these analyses To further the first of these ends presenters at these workshops have included workers from areas as varied as astronomy economics environmental **Remittance-led Development: Rebuilding Old Dependencies Or a Powerful Source of Human Development?** Jörg Helmke, 2010
