

A high-speed photograph of a red apple falling into water, creating a large, dynamic splash. The apple is partially submerged, and the water is captured in mid-air, forming a crown-like shape around the top of the fruit. The background is solid black, making the red apple and white water stand out.

Said-Houari, 2016-01-11 This book presents a variety of techniques for solving ordinary differential equations analytically and features a wealth of examples Focusing on the modeling of real world phenomena it begins with a basic introduction to

differential equations followed by linear and nonlinear first order equations and a detailed treatment of the second order linear equations After presenting solution methods for the Laplace transform and power series it lastly presents systems of

equations and offers an introduction to the stability theory To help readers practice the theory covered two types of exercises are provided those that illustrate the general theory and others designed to expand on the text material Detailed solutions to

all the exercises are included The book is excellently suited for use as a textbook for an undergraduate class of all disciplines in ordinary differential equations *Dynamical Systems* Mahmut Reyhanoglu, 2017-03-15 There has been a considerable

progress made during the recent past on mathematical techniques for studying dynamical systems that arise in science and engineering This progress has been to a large extent due to our increasing ability to mathematically model physical

processes and to analyze and solve them both analytically and numerically With its eleven chapters this book brings together important contributions from renowned international researchers to provide an excellent survey of recent advances in

dynamical systems theory and applications The first section consists of seven chapters that focus on analytical techniques while the next section is composed of four chapters that center on computational techniques

Fundamentals of Differential Equations R. Kent Nagle, E. B. Saff, Arthur David Snider, 2000 New applications driven sections have been added to the chapter on linear second order equations The chapter regarding the introduction to systems and phase plane analysis has been reorganized and modernized to better facilitate student understanding of the material More material on dynamical systems has been added A new section on the phase line has been added to the beginning of the text Group Projects relating to the material covered appear at the end of each chapter Revised exercise sets provide fresh material for instructors who have used the text before Updated Interactive Differential Equations CD is keyed specifically to the text and included free with every book An updated Instructors MAPLE Manual tied to development of the text with suggestions on incorporating MAPLE into the courses and including sample worksheets for labs is available The texts also allow optional use of Computer Algebra Systems with many exercises and projects included to let students use software to solve interesting and realistic problems and exercises Necessary proofs in a conceptual presentation are always included but may be skipped allowing flexibility in the level of c

Modeling with Differential Equations in Chemical Engineering Stanley M. Walas, 1991 Modelling with Differential Equations in Chemical Engineering covers the modelling of rate processes of engineering in terms of differential equations While it includes the purely mathematical aspects of the solution of differential equations the main emphasis is on the derivation and solution of major equations of engineering and applied science Methods of solving differential equations by analytical and numerical means are presented in detail with many solved examples and problems for solution by the reader Emphasis is placed on numerical and computer methods of solution A key chapter in the book is devoted to the principles of mathematical modelling These principles are applied to the equations in important engineering areas The major disciplines covered are thermodynamics diffusion and mass transfer heat transfer fluid dynamics chemical reactions and automatic control These topics are of particular value to chemical engineers but also are of interest to mechanical civil and environmental engineers as well as applied scientists The material is also suitable for undergraduate and beginning graduate students as well as for review by practising engineers
