[Neuropsychology of Childhood Epilepsy](#) Isabelle Jambaqué,Maryse Lassonde,Olivier Dulac,2006-04-11 This book is devoted to the neuropsychological description of childhood epilepsy a neurological condition that constitutes one of the most

prevalent forms of chronic and disabling childhood illnesses Indeed one child out of 20 experiences one or more seizures before the age of 5 and one in a hundred develops epilepsy as a chronic disorder Approximately half of these children with epilepsy display academic difficulties and or behavioral disorders Moreover it is now believed that a sizable proportion of children with learning disability suffer from undiagnosed epilepsy While a great number of textbooks have been devoted to various medical aspects of childhood epilepsy diagnosis genetics etiology drug and surgical treatment etc there have been no comprehensive accounts of the cognitive consequences of this condition Advance of medical knowledge has shown that childhood epilepsy should not be considered as a single disorder but encompasses a whole range of different conditions that exhibit specific clinical EEG and outcome characteristics It is not becoming apparent that these various clinical entities have different cognitive expression that yet need to be specified The purpose of this book is to provide a complete up to date analysis of this multi faceted pathology
