Physicochemical Treatment Processes Lawrence K. Wang, Yung-Tse Hung, Nazih K. Shammass, 2007-11-13 The past 30 years have seen the emergence of a growing desire worldwide to take positive actions to restore and protect the environment from the degrading effects of all forms of pollution air noise solid waste and water Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste exists we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved The principal intention of the Handbook of Environmental Engineering series is to help readers formulate answers to the last two questions The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However realization of the ever increasing complexity and interrelated nature of current environmental problems makes it imperative that intelligent planning of pollution abatement systems be undertaken

Industrial Solid Wastes A. D. Patwardhan, 2013-01-01 Industrial solid wastes unlike liquid effluents and gaseous emissions receive relatively less attention in terms of treatment reuse recycle and recovery of useful by products These solid wastes have great potential for recovery and reuse Predominantly organic wastes can be effectively treated by biological means to yield useful end products like methane gas as fuel and digested slurry as soil conditioner Inert materials like plastics are effectively blended with other building materials thereby improving the quality of the finished product and at least partially solving the problem of disposal of plastics Inorganic wastes are excellent candidates for recovery of reusable building materials like sand and fine aggregate Recycling of useful components from e wastes goes a long way in reducing environmental pollution by toxic and hazardous wastes This book places before the reader different ways and means used by scientists and engineers to minimize pollution of our natural resources and their overexploitation
