**Euro-Par 2004 Parallel Processing** Marco Danelutto, Marco Vanneschi, Domenico Laforenza, 2004-12-27 Euro Par Conference Series Euro Par is an annual series of international conferences dedicated to the promotion and advancement of all aspects of parallel computing The major themes can be divided into the broad categories of hardware software algorithms and applications for parallel computing The objective of Euro Par is to provide a forum within which to promote the development of parallel computing both as an industrial technique and an academic discipline extending the frontier of both the state of the art and the state of the practice This is particularly important at a time when parallel computing is undergoing strong and

sustained development and experiencing real industrial take up The main audience for and participants at Euro Par are seen as researchers in academic departments government laboratories and industrial organizations Euro Par s objective is to be the primary choice of such professionals for the presentation of new sults in their speci c areas Euro Par also targets applications demonstrating the e ectiveness of parallelism This year s Euro Par conference was the tenth in the conference series The previous Euro Par conferences took place in Sto holm Lyon Passau Southampton Toulouse Munich Manchester Paderborn and Klagfurt Next year the conference will take place in Lisbon Euro Par has a permanent Web site hosting the aims the organization structure details as well as all the conference history <http://www.europar.org>

**Advanced Computer Architectures** Sajjan G. Shiva, 2018-10-24 Despite the tremendous advances in performance enabled by modern architectures there are always new applications and demands arising that require ever increasing capabilities Keeping up with these demands requires a deep seated understanding of contemporary architectures in concert with a fundamental understanding of basic principles that allows one to anticipate what will be possible over the system s lifetime Advanced Computer Architectures focuses on the design of high performance supercomputers with balanced coverage of the hardware software structures and application characteristics This book is a timeless distillation of underlying principles punctuated by real world implementations in popular current and past commercially available systems It briefly reviews the basics of uniprocessor architecture before outlining the most popular processing paradigms performance evaluation and cost factor considerations This builds to a discussion of pipeline design and vector processors data parallel architectures and multiprocessor systems Rounding out the book the final chapter explores some important current and emerging trends such as Dataflow Grid biology inspired and optical computing More than 220 figures tables and equations illustrate the concepts presented Based on the author s more than thirty years of teaching and research Advanced Computer Architectures endows you with the tools necessary to reach the limits of existing technology and ultimately to break them *Euro-Par 2008*
