- d. This is a nitrile alkylation involving an anion that is somewhat stabilized by conjugation with the indole ring. The anion was formed using NaNH_2 in liquid NH_3 .

- (1.2) These two measures provide additional useful information and complementary measures to those of the two previous conditional steps. The provision of these further measures will allow authors to see more conditional step profiles. The three conditional step profiles are obtained using $\text{step} = 1$ as default. The two measures provide measures of the $\text{step} = 1$ stepwise order and the ability of the authors to re-equilibrate under these conditions.
