meaning of multimedia information as presented during IFIP's Eighth Data Semantics Working Conference DS 8 organized by its Working Group 2.6 on Databases and held at Rotorua New Zealand in January 1999. DS 8 was planned as an active forum for researchers and practitioners focusing on those issues that involve the semantics of the information represented, stored and manipulated by multimedia systems. Depending on the topic and state of research issues may be covered either deeply theoretically or quite practically or even both. These proceedings contain twenty-one papers carefully selected by an International Programme Committee and organized in six thematic areas: Video Data Modelling and Use, Image Databases, Applications of Multimedia Systems, Multimedia Modeling in General, Multimedia Information Retrieval, Semantics and Metadata. For almost every area, important topics and issues include data modeling and query languages for media such as audio, video and images; methodological aspects of multimedia database design; intelligent multimedia information retrieval; knowledge discovery and data mining in multimedia information; multimedia user interfaces. Three visionary keynote addresses by famous experts: Ramesh Jain, Hermann Maurer and Masao Sakauchi set the stage for discussion and future directions for the field. The collection of papers that resulted now offers a glimpse of the excitement and enthusiasm from DS 8.

Database Semantics *Semantic Issues in Multimedia Systems* is suitable as a secondary text for a graduate level course on database systems, multimedia systems or information retrieval systems and as a reference for practitioners and researchers in industry.
