

- 1.1 Resnick and Halliday in "Physics for Students in Science and Engineering" define a fluid as "a substance that can flow". This is very close to our definition but would include materials undergoing creep and other viscoelastic behavior. However, as a first introduction to the subject of mechanics this definition is adequate.

Pauling in "General Chemistry" does not define fluid but is concerned about gases and liquids. These definitions are concerned with molecular behavior of these two phases.

- 1.2 The diagram referred to in this problem appears as

In strength of materials, we used the concept of an elastic, perfectly plastic stress-strain diagram, as shown. Does such a material satisfy the definition of a fluid? Explain.

This material does not satisfy our definition because a certain stress τ_0 must be reached before there is the possibility of plastic flow. A fluid flows for any shear stress, however small.
