Emerging Solutions for Future Manufacturing Systems Luis M. Camarinha-Matos, 2006-01-04 Industries and particularly the manufacturing sector have been facing difficult challenges in a context of socio economic turbulence characterized by complexity as well as the speed of change in causal interconnections in the socio economic environment In order to respond to these challenges companies are forced to seek new technological and organizational solutions In this context two main characteristics emerge as key properties of a modern automation system agility and distribution Agility because systems need not only to be flexible in order to adjust to a number of a priori defined scenarios but rather must cope with unpredictability Distribution in the sense that automation and business processes are becoming distributed and supported by collaborative networks Emerging Solutions for Future Manufacturing Systems includes the papers selected for the BASYS 04 conference which was held in Vienna Austria in September 2004 and sponsored by the International Federation for Information Processing IFIP

Advanced Solutions of Transport Systems for Growing Mobility Grzegorz Sierpiński, 2017-07-11 What are the parameters that should be taken into account in an advanced simulation model designed for a transport system that promotes green travelling policies How can the goal of modal shift be pursued through ICT solutions Is it enough to apply only a single criterion when planning transport systems What is the importance of information acquisition and provision in Intelligent Transport Systems Answers to these and many other questions can be found in this publication It also contains numerous analyses based on relevant data sets illustrating

the close relationship between ITS and the changes observed in terms of how specific means of transport are used What proves to be particularly important for advanced transport systems is the use of environmentally friendly solutions that reduce their negative environmental impacts accordingly the book also addresses this aspect With regard to the research results discussed and the selected solutions applied the book primarily addresses the needs of three target groups Scientists and researchers ITS field Local authorities responsible for transport systems at the urban and regional level Representatives of business traffic strategy management and industry manufacturers of ITS components Advanced Solutions of Transport Systems for Growing Mobility gathers selected papers presented at the 14th Transport Systems Theory and Practice Scientific and Technical Conference organized by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology The conference was held on 18-20 September 2017 in Katowice Poland More details at www.TSTP.polsl.pl **Process Analysis and Improvement: Text** Marvin S. trucks efficiently is crucial for the operational performance of the parcel hub This book explores different approaches to optimize the truck scheduling problem at parcel hubs by developing several mathematical optimization models Further the author illustrates efficient algorithms to solve the mathematical problem and designs a simulation model to further investigate the problem setting The results show that optimized truck schedules have the potential to significantly improve the operational performance of parcel hubs
