Fundamentals of Statistical Signal Processing: Detection theory Steven M. Kay, 1998 V 2 Detection theory V 1 Estimation theory Manual de computação evolutiva e metaheurística António Gaspar-Cunha, Ricardo Takahashi, Carlos Henggeler Antunes, 2012-06-01 As técnicas computacionais que são hoje denominadas por Computação Evolutiva e por Metaheurísticas se desenvolveram de maneira relativamente independente durante os últimos 40 anos do século XX no seio de duas comunidades científicas que mantiveram relativamente pouco contato ao longo desse período. Durante esse tempo ambos os conjuntos de técnicas se consolidaram sendo hoje reconhecidos como parte integrante do repertório fundamental de ferramentas da Computação e da Engenharia que possibilitam a síntese de muitos dos sistemas tecnológicos hoje existentes. Apenas no decorrer da última década do século XX se formou nas respectivas comunidades científicas uma consciência das conexões existentes entre esses dois corpos de conhecimento que partilham muitos dos seus princípios e fundamentos. O presente livro foi escrito com o objetivo de constituir uma obra de referência em Língua Portuguesa abrangendo os níveis de graduação e pós-graduação do nosso ensino universitário e político na sequência das edições realizadas da Escola Luso Brasileira de Computação Evolutiva **Subject Guide to Books in Print**, 1993 **Signal Processing for High-density Magnetic Recording Channels** Hamid Reza Shafiee, 1994 Modern Spectral Estimation Steven M. G. Childers, 1999-09-16 Strike a balance between theory and practice With this text you will find a balance between theory and practice that allows you to build your understanding of the basic concepts assumptions and limitations of the theory of speech analysis and synthesis The methods for data analysis as well as the theoretical background are provided to help you comprehend the analysis results And you will be able to study the features and properties of speech as a signal without having to record data and write software to analyze the data The text includes two CDs that contain stand alone and MATLAB software and speech and electroglottographic data The CDs illustrate the effects that speech models and speech analysis procedures have on the quality of synthesized speech An extensive speech database provides numerous speech files and other data Examples included in each chapter demonstrate how to use the software The CDs allow you to Calculate the parameters of linear prediction speech models Examine procedures for converting the speech of one speaker to sound like that of another speaker i.e. voice conversion Analyze and alter the temporal structure of the speech signal This allows you to automatically parse speech into various features such as voiced segments unvoiced segments nasal and non nasal segments fricatives stops and more Create speech with a high speaking rate or generate speech with a slow speaking rate Adjust the parameters of the vocal fold model to change the vocal fold tension length thickness mass etc in order to observe the effects of these parameters on the vibratory motion of the vocal folds **Solutions Manual for Signal Detection and**
