allow for profitable monetization Smaller FMR projects are unlikely to be economically viable unless clustered in larger projects or propelled by an enabling and compulsory regulatory framework Large scale capture projects require tailored projects large ancillary infrastructure government planning and capital injections costing hundreds of millions of dollars Although potentially attractive in terms of equity returns to developers midsize flares face various barriers to the financing and execution of FMR solutions Navigating these barriers requires project developers with specific FMR expertise as highlighted through six detailed case studies discussed in this book

Nature-Based Solutions for Restoration of Ecosystems and Sustainable Urban Development Thomas Panagopoulos, 2020-06-16 This volume examines the applicability of nature based solutions in ecological restoration practice and in contemporary landscape architecture by bringing together ecology and architecture in the built environment Green infrastructure is used to address urban challenges such as climate change adaptation disaster risk reduction and stormwater management In addition thermal comfort nature based solutions reintroduce critical connections between natural and urban systems In light of ongoing developments in sustainable urban development the goal is a paradigm shift towards a landscape that restores and rehabilitates urban ecosystems The ten contributions to this book examine a wide range of successful cases of designing healthier greener and more resilient landscapes in different geographical contexts from the United States of America and Brazil through various European regions to Singapore and China While some chapters attempt to conceptualize the interconnections between cities and nature others clearly have an empirical focus Therefore this volume provides a rich body of work and acts as a starting point for further studies on restoration of ecosystems and integrative policies such as the United Nations Sustainable Development Goals
