Re-thinking the Building Envelope Francesco Sommesse, 2024-09-13 This book

illustrates the potential of nature when it comes to rethinking the role of the building envelope which is responsible for energy flows between the internal and external environment in the era of climate change Nature has always inspired architects and engineers in the design of structures and buildings but its role has been limited to a simple morphological imitation with aesthetic value Today however thanks to the biomimetic discipline which imitates the functional processes of nature it is possible to transfer nature s adaptive strategies to architecture and promote the design of buildings and architectural structures that adapt to the surrounding context and respond passively to environmental changes The use of advanced and innovative technologies combined with the use of smart and self responsive materials favours the creation of adaptive and responsive dynamic envelopes capable of adapting their performance to the changing conditions of the environment In this way the envelope is no longer seen as a static element but as dynamic and able to adapt to its context by playing an active role After establishing a general framework for the climate adaptive building envelope and analysing the adaptation strategies of natural organisms this book provides an overview of the biomimetic discipline applied to architecture and building technology The analysis of emblematic and recent case studies together with advanced techniques and materials and the illustration of biomimetic design methods gives this text an added value that promotes the understanding of the different phases necessary to move from nature to architectural technologies This book is an indispensable tool for researchers in the field to understand an innovative and advanced concept that meets the needs of the time In addition it can also help fa ade manufacturers to understand the current directions of scientific academic research in order to propose new technologies to the market
