

The background of the cover is a photograph of a person in a red suit walking on a thin ice floe in a vast, icy sea. The person is walking away from the viewer towards the horizon. The ice is white and broken into many small floes, with dark blue water visible between them. The sky is a pale, overcast blue.

Environmental Chemistry emphasizes the concepts essential to the practice of environmental science technology and chemistry. The format and organization popular in preceding editions is used including an approach based upon the five environmental spheres and the relationship of environmental chemistry to the key concepts of sustainability, industrial ecology and green chemistry. The new edition provides a comprehensive view of key environmental issues and significantly looks at diseases and pandemics as an environmental problem influenced by other environmental concerns like climate change. Features: The most trusted and best selling text for environmental chemistry has been fully updated and expanded once again. The author has preserved the basic format with appropriate updates including a comprehensive overview of key environmental issues and concerns. New to this important text is material on the threat of pathogens and disease, deadly past pandemics that killed millions, recently emerged diseases and the prospects for more environment threats related to disease. This outstanding legacy appeals to a wide audience and can also be an ideal interdisciplinary book for graduate students with degrees in a variety of disciplines other than chemistry. New! Long awaited companion website featuring additional ancillary material.

Environmental Chemistry Solutions Manual R. Scott Martin, 2000 *Laboratory Experiments in Environmental Chemistry* D. Neal Boehnke, R. Del Delumyea, 2000. This lab manual provides an interdisciplinary collection of 23 extensively tested environmental chemistry experiments with extensive introductory background material for each experiment. It covers a broad range of methods and provides detailed instructions on calculation of results. Experiments involve, for example, inorganic and organic profile of sediment and soil cores, the pH of environmental waters and buffer capacity, alkalinity of streams and lakes, trace levels of ions in natural waters, conductivity of natural waters, chloride ion in natural waters, colorimetry and absorption spectra, metals in natural waters and in sediments, atomic absorption spectrometry, the chemical oxygen demand of natural waters and wastewaters, the fluorimetric determination of polycyclic aromatic hydrocarbons, environmental hydrocarbons, air sampling, particulates in urban air, carbon dioxide in the atmosphere, acid rain, decomposition of pollutants with an application to plasticizers and detergents. For chemists and technicians with environmental agencies.
