

Empirical Exercise 4.1

Calculations for this exercise are carried out in the STATA file `EE_4_1.do`.

(a)

Yes, there appears to be a weak positive relationship.

(b) Malta is the “outlying” observation with a trade share of 2.

(c) $\widehat{Growth} = 0.64 + 2.31 \times Tradeshare$

Predicted growth (Trade Share = 1) = $0.64 + 2.31 \times 1 = 2.95$

Predicted growth (Trade Share = 0.5) = $0.64 + 2.31 \times 0.50 = 1.80$

(d) $\widehat{Growth} = 0.96 + 1.68 \times Tradeshare$

Predicted growth (Trade Share = 1) = $0.96 + 1.68 \times 1 = 2.64$

Predicted growth (Trade Share = 0.5) = $0.96 + 1.68 \times 0.50 = 1.80$

(e) Malta is an island nation in the Mediterranean Sea, south of Sicily. Malta is a freight transport site, which explains its large “trade share.” Many goods coming into Malta (imports into Malta) and are immediately transported to other countries (as exports from Malta). Thus, Malta’s imports and exports are unlike the imports and exports of most other countries. Malta should not be included in the analysis.

Econometrics Badi H. Baltagi, 2007-11-21 Here at last is the fourth edition of the textbook that is required reading for economics students as well as those practising applied economics. Not only does it teach some of the basic econometric methods and the underlying assumptions behind them but it also includes a simple and concise treatment of more advanced topics from spatial correlation to time series analysis. This book's strength lies in its ability to present complex material in a simple yet rigorous manner. This superb fourth edition updates identification and estimation methods in the simultaneous equation model. It also reviews the problem of weak instrumental variables as well as updating panel data methods.

Theoretical and Empirical Exercises in Econometrics Nlandu Mamingi, 2005 This is a textbook designed for undergraduate and graduate students and is the result of the author's more than twenty years of involvement with econometrics as both teacher and researcher. It contains theory problems and answers many of which have already been tested extensively in classrooms and tutorials and then refined for the book. It includes the following topics: single equation regressions, dummy and limited dependent variable models, simultaneous equations models, dynamic regression models, unit roots, cointegration and error correction models, aggregation over time, issues forecasting and panel data models. The book does not attempt to duplicate the many standard econometrics books. Rather, it supplements them by focusing exclusively on theoretical and empirical exercises in a systematic way. Although much of the material has a Caribbean flavour, its rigorous and clear presentation will appeal to students and teachers worldwide.

Elements of Financial Risk Management Peter Christoffersen, 2011-11-10 The Second Edition of this best-selling book expands its advanced approach to financial risk models by covering market credit and integrated risk. With new data that cover the recent financial crisis, it combines Excel-based empirical exercises at the end of each chapter with online exercises so readers can use their own data. Its unified GARCH modeling approach, empirically sophisticated and relevant yet easy to implement, sets this book apart from others. Five new chapters and updated end-of-chapter questions and exercises as well as Excel solutions manual support its step-by-step approach to choosing tools and solving problems. Examines market risk, credit risk and operational risk. Provides exceptional coverage of GARCH models. Features online Excel-based empirical exercises.

Bayesian Econometrics Siddhartha Chib, William Griffiths, 2008-12-18 Illustrates the scope and diversity of modern applications, reviews advances and highlights many desirable aspects of inference and computations. This work presents an historical overview that describes key contributions to development and makes predictions for future directions.
