Guide to Wireless Ad Hoc Networks Sudip Misra, Isaac Woungang, Subhas Chandra Misra, 2009-03-02 Overview and Goals

Wireless communication technologies are undergoing rapid advancements The past few years have experienced a steep growth in research in the area of wireless ad hoc networks The attractiveness of ad hoc networks in general is attributed to their characteristics features such as ability for infrastructure less setup minimal or no reliance on network planning and the ability of the nodes to self organize and self configure without the involvement of a centralized network manager router access point or a switch These features help to set up a network fast in situations where there is no existing network setup or in times when setting up a fixed infrastructure network is considered infeasible for example in times of emergency or during relief operations Even though ad hoc networks have emerged to be attractive and they hold great promises for our future there are several challenges that need to be addressed Some of the well known challenges are attributed to issues relating to scalability quality of service energy efficiency and security

Advances in Guidance, Navigation and Control Liang Yan, Haibin Duan, Xiang Yu, 2021-11-12 This book features the latest theoretical results and techniques in the field of guidance navigation and control GNC of vehicles and aircraft It covers a range of topics including but not limited to intelligent computing communication and control new methods of navigation estimation and tracking control of multiple moving objects manned and autonomous unmanned systems guidance navigation and control of miniature aircraft and sensor systems for guidance navigation and control Presenting recent advances in the form of illustrations tables and text it also provides detailed information of a number of the studies to offer readers insights for their own research In addition the book addresses fundamental concepts and studies in the development of GNC making it a valuable resource for both beginners and researchers wanting to further their understanding of guidance navigation and control

Complex Networks Eli Ben-Naim, Hans Frauenfelder, Zoltan Toroczkai, 2004-09-01 This volume is devoted to the applications of techniques from statistical physics to the characterization and modeling of complex networks The first two parts of the book concern theory and modeling of networks the last two parts survey applications to a wide variety of natural and artificial networks The tutorial reviews that form this book are aimed at students and newcomers to the field and will also constitute a modern and comprehensive reference for experts To this aim all contributions have been carefully peer reviewed not only for scientific content but also for self consistency and readability

Out-of-Equilibrium (Supra)molecular Systems and Materials Nicolas Giuseppone, Andreas Walther, 2021-07-19 Out of Equilibrium Supra molecular Systems and Materials A must have resource that covers everything from out of equilibrium chemical systems to active materials Out of Equilibrium Supra molecular Systems and Materials presents a comprehensive overview of the synthetic approaches that use molecular and supramolecular bonds in various out of equilibrium situations With contributions from noted experts on the topic the text contains information on the design of dissipative chemical systems that adapt their structures in space and time when fueled

by an external source of energy The contributors also examine molecules nanoscale objects and materials that can produce mechanical work based on molecular machines Additionally the book explores living supramolecular polymers that can be trapped in kinetically stable states as well as out of equilibrium chemical networks and oscillators that are important to understand the emergence of complex behaviors and in particular the origin of life This important book Offers comprehensive coverage of fields from design of out of equilibrium self assemblies to molecular machines and active materials Presents information on a highly emerging and interdisciplinary topic Includes contributions from internationally renowned scientists Written for chemists physical chemists biochemists material scientists Out of Equilibrium Supra molecular Systems and Materials is an indispensable resource written by top scientists in the field

Cloud Data Centers and Cost Modeling Caesar Wu,Rajkumar Buyya,2015-02-27 Cloud Data Centers and Cost Modeling establishes a framework for strategic decision makers to facilitate the development of cloud data centers Just as building a house requires a clear understanding of the blueprints architecture and costs of the project building a cloud based data center requires similar knowledge The authors take a theoretical and practical approach starting with the key questions to help uncover needs and clarify project scope They then demonstrate probability tools to test and support decisions and provide processes that resolve key issues After laying a foundation of cloud concepts and definitions the book addresses data center creation infrastructure development cost modeling and simulations in decision making each part building on the previous In this way the authors bridge technology management and infrastructure as a service in one complete guide to data centers that facilitates educated decision making Explains how to balance cloud computing functionality with data center efficiency Covers key requirements for power management cooling server planning virtualization and storage management Describes advanced methods for modeling cloud computing cost including Real Option Theory and Monte Carlo Simulations Blends theoretical and practical discussions with insights for developers consultants and analysts considering data center development
