Saturated passenger car markets in the USA and Western Europe and low rates of motorization in new automotive markets like China focus the attention of the market participants on these new growing markets. Moreover, it shows how to deal with the problems and how to use the opportunities regarding the dimensions of internationalization. In such a rapidly changing and growing as well as culturally completely different country like the PRC, the framework conditions and circumstances are of big importance for foreign enterprises willing to do business there. The third chapter deals with possible internationalization strategies for China by showing possibilities of timing and market development strategies plus options for locating business markets. This is also further established in the fourth chapter in which the internationalization strategies of two German enterprises are analyzed. Furthermore, the fourth chapter analyses the internationalization strategies of VW and BMW. Automotive Electricity Joseph Beretta, 2013-03-04. Since the beginning of the century, electrical engineering technologies and applications have pervaded daily life and are present in the majority of everyday products, tools, and appliances. Increasingly, these applications are becoming more prevalent in the automotive vehicle and products market. While change in this field has been relatively slow over the last ten years, the pace of change is now beginning to accelerate, and we are witnessing a wave driven by regulatory constraints and market laws which are sweeping away the last bastions of resistance.
