Visual Art Analysis University of Phoenix Stacey Pierce July 19, 2010 "Dream caused by the flight of a bee around a pomegranate, a second before waking up" By Salvador Dali, 1994, 51? 40. 5 cm, oil on canvas Thyssen-bornemisza collection. "A typical dream with a long theme, the consequences of a sudden accident that causes the awakening" –Salvador Dali. The Style the artist has used is Surrealism. , Salvador created this piece in such a way that the picture looks exaggerated and real. The painting shows highlights, shadows and shapes of a realistic pieces, and shows intently exaggerated color.

The Title of the piece tells the viewer that this painting is based about a dream and then its dramatic awakening, which obviously shows through the painting as there are main focal points that put line this "dream" which concludes to the title. This art work was painted using oils on canvas using a brush. The texture is smooth and the shadow and highlights are immaculate. (Otero, 2010) This art work does not have a political view, but rather gives the viewer the perception of what the painting is through the title of the painting.

Salvador uses symbols in the piece to represent the intentional focus of the dream, the symbols being the little pomegranate, the gun, the tigers, the fish and the big pomegranate. This art work shows brilliant and vibrant colours. Some colors being exaggerated to the fact that the color being used in the piece is not entirely true, for example, true colors of the tigers are done in a vibrant yellow which are false from the color of real tigers. The colors that Salvador uses give the piece depth, the colors used, gives way to the main focal points.

These focal points are brightened, drawing the viewer's attention toward the focal points and then toward the rest of the painting. Oranges, yellows, blues and grays are harmonious in nature. This creates a sense of rhythm as these colors often follow in the groups of warm and cool colors. The warm colors create the main focal point of the picture. Light is used through the elephant; the elephant is the lightest object in the painting. This could perhaps symbolize purity and goodness, showing that the elephant is the opposite of the tigers and gun.

Lights are also used through out the painting itself as the colors are light shades. In this circumstance, this could represent the "new morning" or the "awakening of the dream". Light creates the movement in this piece; it makes the picture flow evenly. The light also creates a sense of depth because of the highlights and shadows. The artist uses space well. The painting draws attention to the focal points by subtle detail in the background, such as the floating island and the rock coming out of the water.

This in its own way creates balance and space in the picture making things extremely even which compliments the color. To add to this balance the artist used natural three dimensional shapes which add a realistic feel to the painting. Line is used to create a sense of movement. Line...

Jaskaran Singh, Neeta Raj Sharma, 2022-01-03 This book provides deep insight into the significance of various forensic techniques underlying the methodical approaches in criminal investigations. The book comprises numerous case studies, examples, and reference materials. It emphasizes on the better practices for criminal investigations including contemporary examinations. The book also describes various methods for investigation of crime scene and evidence collection including biological evidences to the resources of law enforcement agencies. This book encompasses the procedure for crime scene documentation through photography, video, and diagrams and highlights the best practices of packaging the biological evidences at a crime scene. Further, it summarizes the role of forensic autopsy to the criminal investigation system. As such, the book is helpful for forensic scientists, medical practitioners, educators, and law enforcement personnel. *Geological Survey Professional Paper* Geological Survey (U.S.), 1963 **Geological Survey Professional Paper**, 1963 CRM, 1994

Visual data analysis methods can help us in exploring and understanding the underlying patterns present in time series data, but due to their ever-increasing size, the visual data analysis process can become complex. Large data sets can be handled using data abstraction techniques by transforming the raw data into a simpler format while at the same time preserving significant features that are important for the user. When dealing with time series data, abstraction techniques should also take into account the underlying temporal characteristics. This thesis focuses on different data abstraction and pattern identification methods, particularly in the cases of large 1D time series and 2D spatio-temporal time series data which exhibit spatiotemporal discontinuity. Based on the dimensionality and characteristics of the data, this thesis proposes a variety of efficient, data-adaptive, and user-controlled data abstraction methods that transform the raw data into a symbol sequence. The transformation of raw time series into a symbol sequence can act as input to different sequence analysis methods from data mining and machine learning communities to identify interesting patterns of user behavior. In the case of very long duration 1D time series, locally adaptive and user-controlled data approximation methods were presented to simplify the data while at the same time retaining the perceptually important features. The simplified data were converted into a symbol sequence, and a sketch-based pattern identification was then used to identify patterns in the symbolic data using regular expression-based pattern matching. The method was applied to financial time series and patterns such as head and shoulders, double and triple top patterns were identified using hand-drawn sketches in an interactive manner. Through data smoothing, the data approximation step also enables visualization of inherent patterns in the time series representation while at the same time retaining perceptually important points. Very long duration 2D spatio-temporal

eye tracking data sets that exhibit spatio temporal discontinuity was transformed into symbolic data using scalable clustering and hierarchical cluster merging processes each of which can be parallelized The raw data is transformed into a symbol sequence with each symbol representing a region of interest in the eye gaze data The identified regions of interest can also be displayed in a Space Time Cube STC that captures both the temporal and contextual information Through interactive filtering zooming and geometric transformation the STC representation along with linked views enables interactive data exploration Using different sequence analysis methods the symbol sequences are analyzed further to identify temporal patterns in the data set Data collected from air traffic control officers from the domain of Air traffic control were used as application examples to demonstrate the results
