Microsoft Power Bi Web and Dax Programming Jeff L. Hutchinson, 2018-07-30 This workbook guide covers Power BI Web Service and DAX Programming a web based tool that provides cloud services over the Internet to post and view Dashboards. Individual Visual Reports are created using the Power BI Desktop tool which is installed on your local computer. Once you develop Visual Reports in Power BI Desktop then you can use these Visual Reports to build Dashboards in the Power BI Web Service. These tools work together to describe your data sources in a Visual Report which can be updated when desired. The following topics will be covered: Overview First an overview of the interface and the menu system will be provided. This will enable users to switch between the different modules described below in order to develop a Dashboard Dataset. This is used to store the uploaded database to the Power BI Web Service which can be interactive as the database is updated. However it could also be cached stored in Power BI Web Service no connection to another source. A Dataset can be linked to multiple Visual Reports that are used to create a Dashboard. In this web based tool it is possible to click on a specific Dataset to create additional reports. However it is recommended that reports be created in the Power BI Desktop Report Workspace. This will display the Visual Reports created in Power BI Desktop as well as those created in the Power BI Web Service tool all while using the Edit Report tool see Edit Report chapter. The reports in the Reports Workspace will be linked to a single Dataset but they can be linked to multiple Dashboards. Filters are also available to adjust the information in the reports Dashboard. This is the layout of different types of Visual Reports arranged together to provide a message for readers to understand. When you click on a report in the Dashboard it is linked to the Reports Workspace which is also linked to the Datasets. When you click on a Visual Report located in the Dashboard the report will open Edit Report. When a report is created from a Dataset you can use the capabilities to build multiple small Visual Reports such as Clustered Column Charts Pie Charts Cards to display total values Tables of summarized data Matrix reports Maps etc. Because you will want people reviewing the Visual Reports to understand the data stored in the data source the progress

growth or current state of the information can be displayed Workbooks This will allow you to upload an Excel Workbook into Power BI Web Service as the input data source for a Dashboard Then you can create a Visual Report in Power BI Web Service prior to applying all reports to a Dashboard This is an alternative to publishing reports from the Power BI Desktop tool Settings There are adjustments that can be made to the interface to provide additional functionality Settings to be covered include General Dashboard Dataset Workbook Alerts and Subscriptions settings DAX Formula This will explain the terms basic structure and common development techniques Also we will cover how create New Columns in a table create custom calculations known as Measures as well as to create New Tables What s is in the workbook Press Download or Click on the left side of the screen Look Inside Enter one of the following keywords visual reports dashboard share get data gateway etc Take A Class <http://www.elearnlogic.com/download/schedule18.pdf> **Microsoft Power BI Demystified** Elijah Falode,2021-02 Power Bi Demystified enables you to master business intelligence and leverage the Power BI toolsets It covers important concepts such as installation creating data models building basic dashboards as well as visualizations so you make informed business decisions Whether you are a business owner analyst or financial analyst you would like to collate data easily analyze it and share it with your colleague in real time You would want to do this with software that is easy to operate and publishes data with good visuals in a way that you can understand Microsoft Power BI allows you to get data from different sources analyze it and gives you insights on how your business performance You can share workspaces with your colleagues and they can easily access your business reports It makes collaboration easy In this book you will find out what Power BI is the features the benefits and the functions This book also discusses the different versions of Microsoft Power BI Power BI Server Power BI Desktop Power BI Pro Power BI Premium and Power BI Report Server You will get to know the differences between these versions their features benefits and how to set them up You can operate these Power BI versions both on cloud and on premise depending on the features of the versions You can also share your workspace with as many people as you want You will get to know which Power BI version best suits your company s needs Power BI also allows you to ask questions about your data and gives you answers to your question This is due to the artificial intelligence feature It also provides you the insight you need to make informed decisions that impact your company s bottom line in a positive way Microsoft Power BI can also integrate with other on premise apps on your device so as to enable you to collate data easily It operates with natural language so that you won t need the help of an expert to operate If you are looking for an upgrade from your Excel Power BI is the upgrade you need This book will guide you on everything you need to know about Power BI and it gives an easy step by step guide on how to install set up and use it Kindly order your copy to know more about this wonderful data intelligence tool [Data Visualization with Microsoft Power BI](#) Alex Kolokolov,Maxim Zelensky,2024-08-29 The sheer volume of business data has reached an all time high Using visualizations to transform this data into useful and understandable information can facilitate better decision making This practical book shows data analysts as well as
