

ANSWER KEY – “THE MAKING OF THE FITNESS: NATURAL SELECTION AND ADAPTATION”

(Key Concept A) Define “mutation.”

A mutation is a change in an organism’s DNA sequence. Students may also mention that the change is random, but this is not necessary for a complete answer.

2. (Key Concepts A, B, and F) *Is the following statement true or false? Justify your answer in one or two sentences: “Mutations are caused by selective pressure in the environment.”*

False; the mutations discussed in this film occurred at random. (Mutations can be nonrandom, but they are not caused by selective pressure.) Students may also mention that environmental selective pressure acts on the phenotype that results from the mutations but does not cause the mutations or the phenotype to appear.

3. (Key Concepts B and G) *Is the following statement true or false? Justify your answer in one or two sentences: “The same mutation could be advantageous in some environments but deleterious in others.”*

True; the environment or selective pressure determines whether a mutation is beneficial.

4. (Key Concepts A, B, and F) *Is the following statement true or false? Justify your answer in one or two sentences: “The appearance of dark-colored volcanic rock caused the mutation for black fur to appear in the rock pocket mouse population.”*

False; selective pressure does not cause mutations but rather determines whether a mutation is advantageous or deleterious in a particular environment. Students may also mention that the dark-colored volcanic rock played a role in making dark-colored fur (and the corresponding alleles or mutations) favored, but this is not necessary for a complete answer.
