**The Kaguya Lunar Atlas** Motomaro Shirao, Charles A. Wood, 2011-03-02 In late 2007 the Japanese Space Exploration Agency JAXA placed the Kaguya Selene spacecraft in orbit around the Moon to probe the Moon's surface and interior. But unlike previous lunar orbiters Kaguya carries a high definition television camera HDTV sent beyond Earth orbit. Sponsored by the Japanese NHK TV network the HDTV has amazed both scientists and the public with its magnificent views of the lunar surface. What makes these images so much more engaging than standard vertical view lunar photography is that they are taken looking obliquely along the flight path. Thus they show the Moon as it would be seen by an astronaut looking through a porthole window while orbiting only 100 km above the lunar surface. This is the view we all would wish to have but are never likely to except vicariously through the awe inspiring Kaguya HDTV images. Each page features a HDTV image with a map of the entire Moon on the upper left showing where the image is located. On the upper right is a 100-150 word description. Seeing the Moon is not intended solely for lunar scientists who are striving to work out the mysteries of the Moon's origin and evolution. Everyone can appreciate the natural beauty and be entranced by the view of the nearby world where humans may one day live.

*The Chang'E-1 Topographic Atlas of the Moon* Chunlai Li, Jianjun Liu, Lingli Mu, Xin Ren, Wei Zuo, 2015-12-03 This atlas is based on the lunar global Digital Elevation Models DEM of Chang E 1 CE 1 and presents CCD stereo image data with digital photogrammetry. The spatial resolution of the DEM in this atlas is 500m with horizontal accuracy of 192m and vertical accuracy of 120m. Color shaded relief maps with contour lines are used to show the lunar topographical characteristics. The topographical data gathered by CE 1 can provide fundamental information for the study of lunar topographical morphological and geological structures as well as for lunar evolution research.

*The Space Age Generation* William Sheehan, Klaus R. Brasch, 2024-03-05 In 1957 Sputnik launched toward the stars. President Kennedy then announced that the United States would send men to the Moon and then return them to Earth. These pivotal moments sparked an unequalled bound forward in human innovation and scientific exploration. At the heart of this momentous time were the men and women working behind the scenes. Scientists, historians, and astronomers share their memories and contributions from this unparalleled era in essays told in their own words. They are the remarkable generation who witnessed and contributed to some of space science's most stunning achievements. Here they have recorded their memories, their childhood inspirations, their challenges, failures, and triumphs for future generations. A unique and authoritative record of a momentous period in human history. The Space Age Generation highlights the golden age of space exploration and the people who made it happen. **The Hatfield SCT Lunar Atlas** Anthony Cook, 2013-10-11 In 2004 it became obvious that Henry Hatfield's original atlas wasn't suitable for all current commercially made amateur telescopes. Newtonian telescopes and

astronomical refractors for many years the only choice for amateurs invert the observed image The standard Hatfield Atlas therefore follows the IAU International Astronomical Union convention of having maps and photographs with South at the top and West on the left an inverted image However the current ranges of Schmidt Cassegrain and Maksutov telescopes that s most of those manufactured by Meade Celestron and many others don t invert the observed image but instead reverse it left for right That s with North at the top and East on the left Because of the way the human visual system works it is almost impossible to mentally mirror image a map to compare it with the view through the eyepiece so even turning an IAU standard atlas upside down doesn t help This new SCT version of the Atlas solves this problem for observers Identification of lunar features is made quick and easy The new digitally re-mastered second edition vastly improves the clarity and definition of the original photographs significantly beyond the resolution limits of the photographic grains present in earlier atlas versions whilst preserving the layout and style of the original publications This has been achieved by merging computer visualized Earth based views of the lunar surface derived from NASA s Lunar Reconnaissance Orbiter data with scanned copies of Commander Hatfield s photographic plates using the author s own software The result is a The Hatfield SCT Lunar Atlas for 21st century amateur telescopes up to and beyond 12 inch aperture It contains all the features that made the original so widely used a combination of an index of all International Astronomical Union named primary lunar features and twelve chart areas help to locate any named lunar features of interest that can each be examined under typically five different states of illumination Close ups of interesting features are also included The new Atlas is supplemented by an introduction to its use a short description of the digital re-mastering technique and a completely new section describing lunar observing techniques At the end of the atlas there is an index of all named features and crater diameters along with a summary table of the dates and times that the original Hatfield images represent

**The Moon in Close-up** John Wilkinson, 2010-11-19 Information collected by recent space probes sent to explore the Moon by the USA the European Space Agency Japan China and India has changed our knowledge and understanding of the Moon particularly its geology since the Apollo missions This book presents those findings in a way that will be welcomed by amateur astronomers students educators and anyone interested in the Moon Enhanced by many colour photos it combines newly acquired scientific understanding with detailed descriptions and labelled photographic maps of the lunar surface Guided by observation methods explained in the book and 17 Study Areas presented and carefully explained in the last chapter amateur astronomers can observe these features from Earth using telescopes and binoculars Readers who consult the photographic maps will gain a better understanding about the Moon s topography and geology The book is rounded out by a helpful glossary

[The Hatfield Lunar Atlas](#) Anthony Cook, 2012-12-12 The Hatfield Lunar Atlas has become an amateur lunar observer s bible since it was first published in 1968 A major update of the atlas was made in 1998 using the same wonderful photographs that Commander Henry Hatfield made with his purpose built 12 inch 300 mm telescope but bringing the lunar nomenclature up to date and changing the units from Imperial to S I metric

This edition is important since the fact is that modern telescope optics digital imaging equipment and computer enhancement can easily surpass what was achieved with Henry Hatfield's 12 inch telescope and a film camera. This limits the usefulness of the original atlas to visual observing or imaging rather small amateur telescopes. The new digitally re-mastered edition vastly improves the clarity and definition of the original photographs significantly beyond the resolution limits of the photographic grains present in earlier atlas versions while preserving the layout and style of the original publications. This has been achieved by merging computer visualized Earth based views of the lunar surface derived from NASA's Lunar Reconnaissance Orbiter data with scanned copies of Commander Hatfield's photographic plates using the author's own software. The results is a The Hatfield Lunar Atlas for 21st century amateur telescopes up to and beyond 12 inch aperture **Atlas of the**

**Gravity and Magnetic Fields of the Moon** Jaroslav Klokočník, Jan Kostelecký, Václav Cílek, Aleš Bezděk, Gunther Kletetschka, 2022-11-09 This book presents gravity aspects gravity disturbance Marussi tensor two gravity invariants their certain ratio the strike angles and the virtual deformations which are computed and evaluated for the Moon using the recent static global gravity field model GRGM1200A to degree and order of 600 in spherical harmonic expansion. The magnetic anomaly model and surface topography from the LOLA mission are added. Results are shown for the whole Moon for its segments around the Moon and as zooms for selected impact craters maria and catenae they are shortly interpreted and opened for further selenologic applications. The book contains information about the geology of the Moon together with basic information about the magnetic field mapping and topography models New View of the Moon 2 Clive R. Neal, Lisa R. Gaddis, Bradley L. Jolliff, Samuel J. Lawrence, Stephen J. Mackwell, Charles K. Shearer, Sarah N. Valencia, 2024-05-06 Much has happened in the world in the 17 years since the first New Views of the Moon was published as volume 60 of the Mineralogical Society of America in 2006. An exciting new era of lunar exploration has begun including the promise of resuming human lunar exploration exploring the lunar Poles and missions to many other high priority science targets. It is fitting therefore to now summarize the current state of knowledge to the degree possible at a time when advancements in knowledge of the Moon are proceeding at a breakneck pace. Therefore during this period of unprecedented lunar exploration activity and as we continue to rebound from a global pandemic we now happily announce this New Views of the Moon 2 volume summarizing the advances in lunar science and exploration since 2006. The Steering Committee is eternally grateful to all contributors and especially the chapter leads and to Professor Makiko Ohtake University of Aizu Japan and Dr David Blewett Johns Hopkins University Applied Physics Laboratory U S A for organizing the New Views of the Moon 2 Electronic Annex. We deeply appreciate the hard work and dedication of everyone involved in the production of this volume especially Rachel Russell and Ian Swainson at the Mineralogical Society of America. This volume helps to frame our knowledge and expectations for an exciting future of lunar science and exploration and the new discoveries to be made. Having humans return to the Moon now seems more likely than it ever has since the last humans left the Moon on 14 December 1972.

**Modern Mysteries of the Moon** Vincent S. Foster, 2015-10-13 There are still many questions that remain about the Moon which this book examines From concentric craters to lunar swirls water vapor and lunar reverberations on impact Foster collects it all for a fascinating tour that will illuminate the backyard observer's understanding of this easily viewed yet also imperfectly understood celestial object Data from Apollo and a flotilla of unmanned Moon orbiters crashers and landers have all contributed to our understanding of the Moon but these mysteries linger despite decades of research When Project Apollo brought back lunar rocks and soil samples it opened a new chapter of understanding Earth's lone natural satellite a process that continues to this day as old results are revisited and new techniques are used on existing samples Topics such as the origin evolution structure and composition of the Moon however are still under debate Lunar research is still an active field of study New technologies make it possible to continue to learn But even so the Moon continues to hold tight to some of its oldest and most cherished secrets Foster examines many of the most interesting puzzles and what has been revealed by exploring them as well as what questions remain

*Remote Observatories for Amateur Astronomers* Gerald R. Hubbell, Richard J. Williams, Linda M. Billard, 2015-10-23

Amateur astronomers who want to enhance their capabilities to contribute to science need look no farther than this guide to using remote observatories. The contributors cover how to build your own remote observatory as well as the existing infrastructure of commercial networks of remote observatories that are available to the amateur. They provide specific advice on which programs to use based on your project objectives and offer practical project suggestions. Remotely controlled observatories have many advantages, the most obvious that the observer does not have to be physically present to carry out observations. Such an observatory can also be used more fully because its time can be scheduled and usefully shared among several astronomers working on different observing projects. More and more professional level observatories are open to use by amateurs in this way via the Internet and more advanced amateur astronomers can even build their own remote observatories for sharing among members of a society or interest group.

*Endorsements: Remote Observatories for Amateur Astronomers Using High Powered Telescopes from Home* by Jerry Hubbell, Rich Williams and Linda Billard is a unique contribution centering on computer controlled private observatories owned by amateur astronomers and commercialized professional amateur observatories where observing time to collect data can be purchased. Before this book, trying to piece together all of the necessary elements and processes that make up a remotely operated observatory was daunting. The authors and contributors have provided in this single publication a wealth of information gained from years of experience that will save you considerable money and countless hours in trying to develop such an observatory. If you follow the methods and processes laid out in this book and choose to build your own remotely operated observatory or decide to become a regular user of one of the commercial networks, you will not only join an elite group of advanced astronomers who make regular submissions to science but you will become a member of an ancient fraternity. Your high technology observatory will contain a high powered telescope no matter how large it is and from the comfort of home you can actively contribute to the work that started in pre history to help uncover the secrets of the cosmos.

Scott Roberts, Founder and President, Explore Scientific LLC

In the past three and a half decades since I first became involved with remote observatories, the use of remote unmanned telescopes at fully automated observatories has advanced from a very rare approach for making astronomical observations to an increasingly dominant mode for observation among both professional and amateur astronomers. I am very pleased to see this timely book being published on the topic. I highly recommend this book to readers because it not only covers the knowledge needed to become an informed user of existing remote observatories but also

describes what you need to know to develop your own remote observatory It draws on more than two decades of remote observatory operation and networking by coauthor Rich Williams as he developed the Sierra Stars Observatory Network SSON into the world class network it is today This book is the ideal follow on to coauthor Jerry Hubbell s book Scientific Astrophotography Springer 2012 Remote observatories have a bright future opening up astronomy to a new and much larger generation of professional amateur and student observers Machines and humans can and do work well together I hope you enjoy reading this book as much as I have and will take advantage of the developments over the past several decades by the many pioneers of remote observatories Russ Genet PhD California Polytechnic State University Observing Saturn for the first time is a memory that stays with us for the rest of our lives and for many it is the start of an odyssey an odyssey into observational astronomy Remote Observatories for Amateur Astronomers is a book written for observers beginners and old hands alike providing detailed advice to those wishing to improve their observing skills Many will want to build and operate a remotely controlled observatory and for those Part I of this book is an invaluable source of information If like me you choose to avoid the capital outlay of owning your own facility Part II describes how you can use one of the many professionally run large scopes where for a few dollars you can capture spectacular color images of nebulae galaxies and comets My own scientific interest in short period eclipsing binaries has been made possible through the availability of remote telescopes such as those operated by the Sierra Stars Observatory Network SSON Whichever route you take this book is essential reading for all who aspire to serious observing David Pulley The Local Group UK
