The Light And The Dark:

The Light and the Dark Charles P. Snow,1957 **The Light and the Dark** Charles P. Snow,1965 **The Light and the Dark** Charles Percy Snow,1977-02 Chemicals from Microalgae Zvi Cohen,1999-05-27 The production of chemicals from microalgae is becoming a significant area of biological research Chemicals from Microalgae seeks to cover the various aspects that relate to the use of microalgae as a source of chemicals The chapters discuss the occurrence and physiological role of these chemicals and concentrates on the methods aimed at enhancing their content as well as large scale algal biomass production and down stream processing This work written by one of the true pioneers in the field describes the major algal chemicals of interest namely pigments and lipids **The Biology of Cyanobacteria** N. G. Carr,Brian A. Whitton,1982-01-01 Photomorphogenesis in Plants Richard E. Kendrick,G. H. M. Kronenberg,1994 David Dickinson is a household name the king of the catchphrase undisputed darling of daytime TV and a rising star He s a respected antiques expert and exudes a taste for the finer things in life But the road to his success has not been as smooth as his patter and he s learnt a lot at the school of hard knocks **The Timing of Sleep and Wakefulness** J. T. Enright,2012-12-06 The brain functions like a computer composed of subsystems which interact in a hierarchical manner But it is not a single hierarchy but a complex system of hierarchies each of which has its very own and unique feature One of these concerns the cyclic or rhythmic control of neuronal activities which among others give rise to alternating states of wakefulness and sleep The phenomenon of sleep still remains a mystery The present monograph does not give us any new insights into its meaning and significance Yet sleep research may not be the same after the appearance of this book because it gives us a comprehensive mathematical theory which opens our eyes to new insights into the mechanism of the rhythm generation that underlies the wake sleep cycle No one who has worked his way through this book can again look at experimental data without recognizing features which the models developed in its various chapters so strikingly reveal **Neuroendocrine Regulation of Mammalian Pregnancy and Lactation** Paula J. Brunton,David R. Grattan,2024-04-26 Adaptations to maternal physiology are required for a successful pregnancy outcome These changes are primarily orchestrated by the mother s brain and involve multiple neuroendocrine systems For this book the editors have gathered internationally recognized experts who have contributed to the major advances in our understanding of different aspects of the neuroendocrine regulation of mammalian pregnancy and lactation The book begins with a discussion of how pregnancy is recognized and maintained and the role of the placental hormones in supporting key adaptations required for a successful pregnancy The next few chapters focus on the neuroendocrine adaptations that occur during pregnancy in some key regulatory processes to ensure a sufficient supply of energy and nutrients protect the fetus from potentially harmful maternal stress hormones and prepare mammals for birth milk production lactation and motherhood Finally our current understanding of how the significant peripartum hormonal changes contribute to the mother s cognitive function and mood is examined This book provides a broad overview of the

finely orchestrated neuroendocrine adaptations that occur in pregnancy and lactation and discusses how such changes contribute to maximizing the likelihood of a positive outcome for mother and infant. Importantly, the evidence for involvement of neuroendocrine dysregulation in some pregnancy-related complications such as preterm birth and perinatal mood disorders is also highlighted. In addition to addressing fundamental mechanisms in the regulation of mammalian pregnancy and lactation, the book includes the most recent advances in the field made possible by utilizing the latest innovative research technologies. Moreover, it provides opinions on optimal experimental approaches, relates findings from experimental animal models with those from humans, and outlines the direction and opportunities for future research in this arena. It is an essential resource for undergraduate students, postgraduate students, and early career researchers embarking upon their journey in the fields of neuroendocrinology, endocrinology, reproductive biology, or behavioural neuroscience. It also provides a valuable synopsis for established neuroendocrine researchers and educators, especially those whose interest transcends the nexus between neuroendocrinology and reproductive biology. This is the 15th volume in the International Neuroendocrine Federation (INF) Masterclass in Neuroendocrinology series, which aims to illustrate the highest standards and to encourage the use of the latest technologies in basic research and hopes to provide inspiration for further exploration into the exciting field of neuroendocrinology.

Internal Time Till Roenneberg, 2012-04-30 Early birds and night owls are born, not made. Sleep patterns are the most obvious manifestation of the highly individualized biological clocks we inherit, but these clocks also regulate bodily functions from digestion to hormone levels to cognition. By understanding and respecting our internal time, we can live better.

Lipid signaling in plants Xuemin Wang, Kent D. Chapman, 2013-07-30 Cell membranes are the initial and focal sites of stimulus perception and signal transduction. Membrane lipids are rich sources for the production of signaling messengers that mediate plant growth, development, and response to nutrient status and stresses. In recent years, substantial progress has been made toward understanding lipid signaling in plants, but many fundamental questions remain. What lipids are signaling messengers or mediators in plants? How are the signaling lipids produced and metabolized? In what plant cellular and physiological processes are various lipid mediators involved? How do they carry out their signaling functions? How do lipid signaling networks contribute to modulating plant growth, development, and responses to hormones and stresses? In this Research Topic issue, we invite the broad plant community to address the above questions.

Reproduction: Part B Peter K.T. Pang,1991-02-28 Vertebrate Endocrinology Fundamentals and Biomedical Implication Volume 4 Part B Reproduction provides information relevant to the structure and function of the vertebrate reproductive endocrinology This book deals with a variety of subjects including oocyte maturation gestation ovulation vitellogenesis spermatogenesis as well as the maturation and aging of the reproductive system Organized into nine chapters this volume starts with an overview of the gonadotropin releasing hormone GnRH which is the physiological regulator of luteinizing hormone LH and follicle stimulating hormone FSH release from the pituitary gland This book then explores the significance of gonadotropins in animal life which act directly on the gonads of vertebrates and control the development maturation and release of gametes Other chapters consider the interactions between the reproductive system and the pineal gland in photoperiodic mammals The final chapter deals with the evolution of the endocrine systems which is involved in the control of vertebrate reproduction Reproductive endocrinologists and developmental neuroendocrinologists will find this book extremely useful

Planning and Designing Research Animal Facilities Jack Hessler,Noel Lehner,2011-04-28 Research institutions have or are planning to build expand and renovate animal research facilities to keep up with the demands of biomedical research caused in part by growth in the use of genetically altered rodents and the upsurge of research in infectious diseases Properly designed facilities greatly facilitate effective management and high quality day to day animal care that is required to optimally support animal research and testing There are multiple solutions to address the myriad of factors that influence the design and construction of animal research facilities There is no best design applicable for all facilities and arguably not even a single best design for a given facility For this reason Planning and Designing Research Animal Facilities is not intended to be a how to book The goal is to cover the basic programmatic requirements of animal research facilities provide ideas for meeting those requirements while hopefully stimulating the creative process in which designers in consultation with those who work in animal research facilities generate even better ideas That is how progress has been made and will continue to be made Facilitates communication between the parties involved in planning and designing animal facilities by providing contemporary information and stimulating creativity that will help lead to wise decisions and advance the knowledge base for planning design and constructing animal research facilities
