Descriptions of the detailed procedures and methods used in trials that have been conducted in the past have generally not been published. As a consequence those planning such trials have few guidelines available and little access to previously accumulated knowledge. In this book the practical issues of trial design and conduct are discussed fully and in sufficient detail for the text to be used as a toolbox by field investigators. The toolbox has now been extensively tested through use of the first two editions and this third edition is a comprehensive revision incorporating the many developments that have taken place with respect to trials since 1996 and involving more than 30 contributors.
