Structured Computer Organization Andrew S. Tanenbaum, 1984 Preserving the same popular structure found in the previous four editions of this best selling book Andrew Tanenbaum teaches that a computer can be structured as a hierarchy of levels In this book he covers them all including the digital logic level the microarchitecture level the instruction set architecture level the operating system machine level and the assembly language level      **Programming for Software Sharing** D.T. Muxworthy, 2012-12-06 Most computer users are familiar with the problems of sharing software with others and the transfer of programs from one computing environment to another Software represents an ever increasing proportion of the cost of computing and these costs tend to nullify all the economic advantages flowing from the wider availability of cheap hardware Years ago it was hoped that the widespread use of high level programming languages would help in alleviating the problems of software production by increasing productivity and by making it simpler for users with similar problems to be able to use the same programs possibly on different types of machines It is a common experience that in practice this simple optimism has proved to be unfounded It was these considerations which led us in 1979 to organize a two week course on Programming for Software Sharing at the European Community Joint Research Centre Ispra Establishment Italy forming part of the regular series of Ispra Courses With prominent invited lecturers local contributions and through discussion sessions we examined with an audience from many countries the problems involved in the sharing and transfer of software as well as suggesting ways of overcoming them In our local environment we are faced daily with three problems both from engagements in software exchange in the scientific technical field on a Europe wide or world wide basis and from work with programming techniques and contributions to the international standardization process      Department of Defense Catalog of Logistics Models, 1990      Assembly Language Programming for the VAX-11 Karen A. wavelets and Givens Haar transforms the last chapter discusses the problem of signal multiresolution This book presents numerous interesting problems and concepts of unitary transformations such as the Fourier Hadamard Hartley Haar paired cosine and new signal induced transformations It aids readers in using new forms and methods of signals and images in the frequency and frequency and time domains
