A **computer science** essay may be about a technology, a method or a feature which relates to computer and technologies. Since computer science is one of the major and most opted for field nowadays, so such essays have a growing importance. Such essays are helpful in determining usefulness of any feature related to the field of computer.

These essays are mainly directed with people relating to this field, so usually technical terminologies are used. It also requires a lot of research and background knowledge. The writer should be aware of this field. It is more appropriate if the writer is himself from this field, only then a **computer science essay** is more improved and better.

Since **computer science essays** include technical information that is why they require a great deal of attention to each and minute detail. They cannot be written by the writer himself. It should be properly researched and thoroughly gone through before writing down. These essays cannot be required by just some layman, but a person with proper information and relating to the field. To give the essay a professional appearance and touch, it is important that it should be completely researched and the choice of words also matter a lot. Only professional words should be used, and the writer should not use any biased or emotional wordings.

The audience aimed could be anyone but mostly is composed of professionals or people from the computer science field. Therefore, this gives the essay writer the liberty to choose technical words and terminologies too. But overall the essay should be logically stated and framed in a way that it should appear unique and not redundant to the reader. Starting from proper introduction to the main body and ending off with a good summary or conclusion about the whole topic of the essay.

Wong, 2011 This dissertation is composed of three essays Essay 1 Does School Start Too Early For Student Learning considers the connection between school start time and student performance Biological evidence indicates that adolescents internal clocks are designed to make them fall asleep and wake up at later times than adults This science has prompted widespread debate about delaying school start times in the U S a country which has some of the earliest start times worldwide The debate suffers however from a glaring absence of evidence the small number of prior studies has been too low powered statistically to test whether later start times improve achievement I fill the gap by studying achievement across a large nationally representative set of high schools that have varying start times I identify the positive effect of later clock start times as well as the independent effect of greater daylight at school start time My primary empirical method is cross sectional regression with rich controls for potentially confounding variables The findings are confirmed by regression discontinuity analysis focused on schools close to time zone boundaries I quantify the net gain in welfare from having an additional hour of sunlight before school starts by comparing the substantial lifetime earnings benefits for students against the likely the societal costs Essay 2 Student Success and Teaching Assistant Effectiveness In Large Classes considers the impact teaching assistants TAs have on student performance In universities TAs play a crucial role by providing small group instruction in lecture courses with large enrollment The multiplicity of TAs creates both positive opportunities and negative incentives On the one hand some TAs may excel at tasks such as helping struggling students at which other TAs fail If so all students may be able to learn better if they can match themselves to the TA that best suits their needs On the other hand the multiplicity of TAs means that students in the same class often receive instruction that varies in quality even though they are ultimately graded on the same standard In this paper we use data from a large lecture course in which students are conditionally randomly assigned to TAs In addition to administrative data on scores and grades we use survey data which we generated on students initial preparation their study habits and their interactions with TAs We identify the existence of variation among TAs in teaching effectiveness We also identify how TAs vary in their effectiveness with certain subpopulations of students the least and best prepared students with different backgrounds and so on Using our parameter estimates we simulate student achievement under scenarios such as random assignment to TAs elimination retraining of the least effective TAs and matching of TAs to students based on initial information to show the potential gains in student welfare

from more efficient matching Essay 3 A Study of Student Majors A Historical Perspective considers whether differing financial returns across degrees are a significant factor in a student's choice of a major During the late 1990s the U S experienced a technology boom that significantly increased the initial salary offers to engineering students and computer science students in particular These dramatic increases in returns provide an excellent opportunity to examine not only how students respond to salary levels but also to salary trends The existing literature has focused on the extent to which differing financial returns can affect a student's choice of undergraduate major This paper extends the analysis to test if trends in salary levels also affect the share of students selecting into various majors using a comprehensive dataset of all post secondary institutions I find that students select into majors that offer higher salaries and have greater wage growth Using a flexible empirical model that allows students to respond to both changes in salary levels and growth I find that the results hold across majors and within engineering disciplines These results help to explain why for instance the percentage of students choosing to major in computer science grew more rapidly than could be explained by salary level alone
