Theory for a Towed Wheel in Soil John L. McRae, 1964 The report deals with one small phase of the problem of mobility for cross country vehicles namely a wheel being towed through soft soil A new concept in soil mechanics is sought which will cope with the problem of the behavior of soil when massive displacements are involved as occurs when a wheel cuts a deep rut in soft material It is suggested that such movement of a soil is more in the nature of a flow phenomenon and an energy per unit volume concept is hypothesized in which the total energy spent area under the load sinkage curve is divided by the net volume of soil displaced by a penetrating element Author *Technical Regulations* United States.
