

Guidelines for Installing RedLINK Devices

- When installing more than one Thermostat and Equipment Interface Module, mount the Equipment Interface Modules at least 2 feet apart for best RedLINK performance. No minimum distance is required between the Thermostats if the Thermostat is linked to an Equipment Interface Module.
- When the Thermostat is wired directly to the equipment (No Equipment Interface Module and No TrueZONE Wireless Adapter), mount the Thermostats at least 2 feet apart for best RedLINK performance.
- To determine if a RedLINK device will communicate properly in the installed location, during the connection process, press and quickly release the connect button on the RedLINK device at the desired mounting location. If the RedLINK device connects, then it will work reliably during normal operation. If the RedLINK device does NOT connect, try a new location. During the connection process, the signal is sent at low power and during normal operation the signal is sent at high power.
- To connect a RedLINK device, make sure to press and quickly release the connect button on the RedLINK device. Press and holding the connect button down too long will not allow the device to connect.
- If you link the Thermostat to the TrueZONE Wireless Adapter, you will NOT be able to do the following: control humidification, dehumidification or ventilation, setup a program schedule remotely from a computer, smart phone or tablet, work with the Wireless Indoor Sensor, Entry / Exit Remote or the Vent and Filter Boost Remote. To use these features, wire the Thermostat directly to the zone panel or use an Equipment Interface Module.
- If you are using a RedLINK device from a previous installation, you must reset the device first before you re-connect it to the new Thermostat/Equipment Interface Module. See page 116 for more information.

Installing Equipment Interface Module (if used)

If no Equipment Interface Module is used, skip to "Selecting Thermostat Location" beginning on page 11.

NOTE: If an EIM is mounted inside a metal cabinet, such as a commercial rooftop unit, it is recommended to use a THM4000R1000 Wireless Adapter for extended wireless range. Mount the Wireless Adapter outside the metal cabinet and connect to the ABCD terminals at the EIM. The Wireless Adapter functions as a remote antenna for the EIM. After it is wired to the EIM, it automatically takes over as the antenna for RedLINK communication. For best RedLINK performance, avoid mounting the Wireless Adapter above the roof deck or outside the exterior walls.

NOTE: If you install more than one thermostat and EIM, the EIMs must be at least 2 feet apart for best RedLINK performance.

CAUTION

Electrical Hazard.
Can cause electrical shock or equipment damage.
Disconnect power before wiring.

The Equipment Interface Module (EIM) can be mounted vertically on the HVAC equipment or on a wall in the equipment room.

1. Mount the EIM near the HVAC equipment, or on the equipment itself. Use screws & anchors as appropriate for the mounting surface.
2. To wire the EIM, strip 1/4" insulation, then insert wires (see Fig. 7). For wiring diagrams, see "Wiring" beginning on page 117.

Fig. 6. THM4000R1000 Wireless Adapter wired to the EIM.

Fig. 7.

NOTE: Link EIM to thermostat **BEFORE** linking any RedLINK accessories. See "Linking RedLINK Accessories" on page 14.

3. If you are installing discharge and return air sensors, see "Selecting Discharge and Return Air Temperature Sensor Mounting Locations" beginning on page 9).

Wiring 24 Vac Common

- **Single-Transformer System**—Connect the common side of the transformer to the C screw terminal of the EIM. Leave the metal jumper wires in place between R, RC, and RH.
- **Two-Transformer System**—Connect the common side of the cooling transformer to the C screw terminal of the EIM. Remove the metal jumper wire between RC and RH. Connect the hot side of heating transformer to RH and leave the jumper wire between R and RC and connect the hot side of cooling transformer to R or RC.
