

→ Aim of the Experiment - To determine resistivity of two/three wires by plotting a graph between potential difference versus current.

→ Apparatus and Material - wires of unknown resistance, battery, a voltmeter, milliammeter, a rheostat, a plug key, connecting wires and a piece of sand paper, a meter scale, and a screw gauge.

→ Principle:-

- Ohm's law states that the electric current flowing through a conductor is directly proportional to the potential difference across its ends, provided the physical state of the conductor remains unchanged.

- Let I ampere (A) be the current through a resistor wire AB in an electric circuit as shown in figure. Let V volt (V) be the potential difference across the ends of the wire AB. According to the Ohm's law $I \propto V$ or $V \propto I$ and hence,

$$V = IR \text{ or } R = \frac{V}{I} \text{ --- (1)}$$

Laboratory experiments can be a challenge for teachers in small schools or home schools This manual and the kit designed to accompany it are an effort to help solve this problem The hands on laboratory exercises have been designed with two principle goals in mind 1 educational challenge and 2 convenience for the teacher Every experiment clearly teaches a scientific principle They cover a number of topics usually taught at the 11th or 12th grade level The equipment has been chosen or in some cases developed by the authors to produce successful results and give the student a real learning experience This kit is only intended to cover the laboratory portion of a high school physics course The rest of the course would be covered in a standard text
