Physics Ranking Task Exercises:

Ranking Task Exercises in Physics Thomas L. O'Kuma, David P. Maloney, Curtis J. Hieggelke, 2000 Those who have used Ranking Tasks have found that they frequently elicit students natural ideas rather than a memorized response about the behavior of a given physical system In addition asking students to consider the same situations in a variety of ways often helps them begin to correct any misconceptions they may have When students realize that they have given different answers to variations of the same question they begin to think about why they responded as they did in each case This in turn prompts them to consider which responses they believe in more strongly and why The basic structure of a Ranking Task comprise four elements a description of the physical situation including any constraints and the basis for ranking different arrangements a set of figures showing the different arrangements of the situation to be compared a place to record the ranking of each variation a place to explain the reason for each ranking choice A CD ROM in the back of the book provides each Ranking Task in a pdf file for ease of use in printing and copying for non commercial classroom needs

The Use of Qualitative Representations with Ranking Task Exercises in Physics Peter Michael Vreeland, 2012 This study examined the use of ranking task exercises in physics as a means to elicit student's quantitative and or qualitative understanding of four different physics concepts Each ranking task exercise in physics asked students to examine several different scenarios that contain a number of quantitative features and then arrange the scenarios in an ordered sequence according to some other quantitative feature In this study students completed four different ranking task exercises as part of their coursework in their high school physics class The responses of students to these ranking task exercises were scored analyzed and categorized according to the extent to which a student's response was primarily quantitative or primarily qualitative in nature The results show that while students relied on a combination of both qualitative and quantitative representations as they completed the exercises the majority of students used qualitative representations in their solutions to the ranking task exercises in physics While the students qualitative and quantitative representations supported the students rankings of the scenarios in each ranking task exercise the qualitative representations used by the students provided insight into the student's current understanding of the physics concepts being investigated The findings suggest that regardless of the representation used by the student to complete the ranking task exercise students had difficulty in correctly ranking the scenarios in all of the ranking task exercises used in this study While the students used both quantitative and qualitative representations in their solutions to ranking task exercises in physics that contained two quantitative variables the study found that students relied

exclusively on qualitative representations in their solutions to the ranking task exercise in physics that contained four quantitative variables
