Response and Catastrophe Mechanisms of Geotechnical Underground Exploration: Theories and Numerical Modeling Yongqiang Zhou, Shaobo Chai, Kai Liu, 2024-11-18 The pursuit of deep seated resources and space utilization has emerged as a strategic direction for global superpowers in the new era with a growing emphasis on diving into the depths of the Earth The rapid urbanization has resulted in an accelerated demand for underground exploration particularly with regards to major infrastructure projects such as railways and highways that often require the construction of numerous mountain and water crossing tunnels Also deep seated energy exploration and storage frequently involve complex challenges e g a range of geological hazards including earthquakes rock bursts large and uneven deformations and instability induced by blasting or fault slippage in rock and soil masses Therefore the response of geological formations and structures in underground exploration the mechanisms of disasters and the corresponding evaluation methods are crucial issues in ensuring the construction and safe operation of such projects

Computerized Adaptive Testing: Theory and Practice Wim J. van der Linden, Cees A.W. Glas, 2005-12-30 Modern computer technology has opened up several new possibilities for optimizing the administration of educational and psychological tests In computer adaptive testing CAT tests are automatically tailored to the proficiency level of the individual examinees Currently nearly all large scale testing programs in the western world are already adaptive or in the process of becoming so Written by active CAT researchers from Europe and North America the chapters offer a comprehensive introduction to the latest developments in the theory and practice of CAT The book can be used both as a basic reference on the state of the art in CAT and a valuable resource in graduate courses on test theory The theoretical chapters in this book cover such topics as item selection and ability estimation item pool development and maintenance item calibration and model fit and testlet based adaptive testing The practical chapters describe the operational aspects of existing large scale CAT programs

Naval Air Systems Command, 1974 Stock Assessment Vincent F. Gallucci, Saul B. Saila, Daniel J. Gustafson, Brian J. Rothschild, 2023-05-31 Stock Assessment Quantitative Methods and Applications for Small Scale Fisheries is a book about stock assessment as it is practiced It focuses on applications for small scale or artisanal fisheries in developing countries however it is not limited in applicability to tropical waters and should also be considered a resource for students of temperate fishery management problems It incorporates a careful sample design various mathematical models as a basis for predicting consequences for stock exploitation and discusses the impact of exploitation on non targeted species This was a unique concept involving a collaborative effort between U S and host country scientists to address issues of regional and global concern through innovative research Unlike other books on stock assessment that show mathematical models this is the only book of its kind that discusses how an assessment is carried out It looks at the field as a whole and includes sampling age determination and

acoustics The book represents the culmination of a nine year program financed by the United States Agency for International Development to provide new or improved methods of stock assessment for artisanal fisheries *Flight Mechanics Modeling and Analysis* Jitendra R. Raol, Jatinder Singh, 2023-03-31 Flight Mechanics Modeling and Analysis comprehensively covers flight mechanics and flight dynamics using a systems approach This book focuses on applied mathematics and control theory in its discussion of flight mechanics to build a strong foundation for solving design and control problems in the areas of flight simulation and flight data analysis The second edition has been expanded to include two new chapters and coverage of aeroservoelastic topics and engineering mechanics presenting more concepts of flight control and aircraft parameter estimation This book is intended for senior undergraduate aerospace students taking Aircraft Mechanics Flight Dynamics Controls and Flight Mechanics courses It will also be of interest to research students and R D project scientists of the same disciplines Including end of chapter exercises and illustrative examples with a MATLAB based approach this book also includes a Solutions Manual and Figure Slides for adopting instructors Features Covers flight mechanics flight simulation flight testing flight control and aeroservoelasticity Features artificial neural network and fuzzy logic based aspects in modeling and analysis of flight mechanics systems aircraft parameter estimation and reconfiguration of control Focuses on a systems based approach Includes two new chapters numerical simulation examples with MATLAB based implementations and end of chapter exercises Includes a Solutions Manual and Figure Slides for adopting instructors

Some Bayesian Statistical Techniques Useful in Estimating Frequency and Density Douglas H. Johnson, 1976 This paper presents some elementary applications of Bayesian statistics to problems faced by wildlife biologists Bayesian confidence limits for

frequency of occurrence are shown to be generally superior to classical confidence limits Population density can be estimated from frequency data if the species is sparsely distributed relative to the size of the sample plot For other situations limits are developed based on the normal distribution and prior knowledge that density is non negative which insures that the lower confidence limit is non negative Conditions are describes under which Bayesian confidence limits are superior to those calculated with classical methods examples are also given on how prior knowledge of the density can be used to sharpen inferences drawn from a new sample
