Chan, 2023-06-29 This is an open access book With the progress of social civilization social science and its research are becoming more and more important Theoretically and practically the study of social phenomena and social problems and the development of prosperous social sciences are the eternal themes of human beings At present social science research and its results can hardly meet the needs of social development especially the unscientific evaluation of social science results which has aroused great concern from all walks of life and has produced dirt and questions on social science thus affecting the proper development of social science Max Weber once said that the most important function of social science in modern times is to keep people clear headed and to resist the delusions of prophetic legislators Humanities and arts are the process of perceiving realizing thinking manipulating and expressing objective or subjective objects through capturing and excavating feeling and analyzing integrating and applying or displaying the stage results in the form obtained through feeling seeing hearing smelling touching The social sciences and humanities and arts contain content that will directly affect our lives and the way society functions And by reacting to today's increasingly intricate problems and situations through systematic and professional discussions they will further contribute to the improvement of institutions and the development of society By thinking about issues and looking at problems and the world from different perspectives by putting the two

together it may be possible to have more comprehensive appropriate and better responses for example the development of laws requires a deeper understanding of the environment in which they are implemented international trade requires a certain understanding of the customs of different countries and the development of tax and economic policies requires a certain understanding of the population consumer demand etc

Reimagining Communication in a Post-pandemic World: The Intersection of Information, Media Technology, and Psychology Runxi Zeng, Hichang Cho, Richard David Evans, Anfan Chen, 2023-04-05

The COVID 19 pandemic has dramatically changed social interactions. Social distancing policies, lockdowns, and mandatory quarantines have accelerated the technological mediation of communication, e.g., AI-mediated communication, computer-mediated communication, on an unprecedented scale, willingly or otherwise. Many physical activities, such as office work, education, and conferences, have had to be performed in the online space through social media apps, the metaverse, or specialized programs on mobile phones or laptops as part of pandemic control efforts. As a result, digitally mediated channels have become critical for information acquisition and communication across a wide spectrum of human activities, such as education, social interaction, entertainment, and commercial activities. Human beings are increasingly reliant on non-human agents, including social media, Artificial Intelligence (AI), powered tools, or smartphone/mobile devices, for most routine activities, professional communication, and social interactions. As scientific understanding of COVID 19 improves, pandemic restrictions are gradually loosening. However, it remains to be seen whether the pandemic communication paradigm, characterized by heavy technological mediation and reliance on non-human agents, will also gradually decline or will the paradigm shift become deeply entrenched with further acceleration of dependency on technological mediation and non-human agents.
