Topic: LEXICAL ANALYSIS

INTRODUCTION

Lexical analysis is the first phase of a compiler. It takes the modified source code from language preprocessors that are written in the form of sentences. The lexical analyzer breaks these syntaxes into a series of tokens, by removing any whitespace or comments in the source code.

If the lexical analyzer finds a token invalid, it generates an error. The lexical analyzer works closely with the syntax analyzer. It reads character streams from the source code, checks for legal tokens, and passes the data to the syntax analyzer when it demands.

SPECIFICATION AND RECOGNITION OF TOKENS

In this section we will discuss the concept of tokens and understand how token are specified.
