

# SOCIAL LEARNING THEORY

Social learning theory explains how individuals acquire knowledge, attitudes, and behaviors through observation, imitation, and interaction with others.

## OVERVIEW

Social learning theory emphasizes the role of observational learning in shaping human behavior. It posits that people learn not only through direct experience but also by observing and modeling the behavior of others. This theory suggests that individuals acquire new skills, attitudes, and values by imitating the actions of role models and by receiving reinforcement based on their observed behaviors.

## EXAMPLE

**Bonobo Doll Study:** This study demonstrated social learning. In the study, children observed either an adult model behaving aggressively towards a doll or an adult engaging in non-aggressive behavior towards the doll. Children exposed to the aggressive model were more likely to imitate the aggressive behaviors with the doll, providing empirical support for SLT.

safety and security concerns related to the spread of attacks by violent extremist groups across the eastern flanks of both countries The increasing frequency and intensity of these attacks have led to the loss of lives property and the displacement of large groups of people The attendant deepening of food livelihood and human insecurities has contributed to a rural exodus of men and women to cities and other economic enclaves in search of alternate sources of food and income The arrival of displaced persons fleeing the attacks has increased pressure on already limited food stocks and other assets of host communities COVID 19 added another layer of vulnerability In addition to the disease burden lockdowns and restrictions on the movement of persons affected the ability of communities to travel to engage in nonfarm economic activities for supplementary income and food This greatly affected the food and livelihood security systems of the populations in these already impoverished and fragile communities

Taking Stock Francis T. Cullen, John Paul Wright, Kristie R. Blevins, 2008-12-01 Criminology is in a period of much theoretical ferment Older theories have been revitalized and newer theories have been set forth The very richness of our thinking about crime however leads to questions about the relative merits of these competing paradigms Accordingly in this volume advocates of prominent theories are asked to take stock of their perspectives Their challenge is to assess the empirical status of their theory and to map out future directions for theoretical development The volume begins with an assessment of three perspectives that have long been at the core of criminology social learning theory control theory and strain theory Drawing on these traditions two major contemporary macro level theories of crime have emerged and are here reviewed institutional anomie theory and collective efficacy theory Critical criminology has yielded diverse contributions discussed in essays on feminist theories radical criminology peacemaking criminology and the effects of racial segregation The volume includes chapters examining Moffitt s insights on life course persistent adolescent limited anti social behavior and Sampson and Laub s life course theory of crime In addition David Farrington provides a comprehensive assessment of the adequacy of the leading developmental and life course theories of crime Finally Taking Stock presents essays that review the status of perspectives that have direct implications for the use of criminological knowledge to control crime Taken together these chapters provide a comprehensive update of the field s leading theories of crime The volume will be of interest to criminological scholars and will be ideal for classroom use in courses reviewing contemporary theories of criminal behavior
