Color Psychology Paper

Research Question:

How does color affect one's mood?

Review of Literature:

Colors may just seem simple and unimportant, but they affect our daily lives more than we may know. If someone is feeling angry, it could just be because they're angry, or it could be perhaps that they are surrounded by or looking at the color red. That's right! People's moods can change just because they are looking at different colors! There are many theories on how just a simple color can change one's whole mood.

According to Johnson (2007), color does affect mood by producing certain chemicals and stimulating different feelings such as hunger. For example, blue can make one feel calm because it releases calming chemicals, and red can make one hungry because it is an appetite stimulant. Yellow can make one feel irritated, and it is a fact that people lose their temper most in yellow rooms. However, pink is tranquilizing and can make one feel weak. In conclusion, Johnson says that depending on the color, one's body can do things (like producing chemicals) that cause a certain emotional reaction (mad, sad, etc.).

Another idea, by Smith (2007), is that the effect color produces is based on what one's body does in response. For example, yellow is mentally stimulating, and activates memory, whereas red increases confidence. Also, brown can make a person feel orderly and stable, while a dark blue can make one feel sad. Therefore, Smith says that different colors do in fact change one's mood and the consequences can be negative or positive.

A third writer, Wollard, (2000) seems to think that color can affect one's mood, but the effect also can depend on one's culture and what one's personal reflection may be. For example, someone from Japan may not associate red with anger, as people from the U.S. tend to do. Also, a person who likes the color brown may associate brown with happiness. However, Wollard does think that colors can make everyone feel the same, or close to the same, mood. According to Wollard, pink reduces aggression, which is why the walls of the jail cells in the Seattle prison are pink! Also, brown can make one feel comforted. Wollard feels that colors do affect one's mood, but there are other factors that can alter what one is supposed to feel.

Eric, John, and Paraag's (2007) main point about color psychology is that color has both a physiological and psychological effect. For example, green makes people feel relaxed because it relaxes their muscles and makes them breathe deeper and more slowly. Furthermore, blue lowers blood pressure, which makes one feel calm. Eric, John, and Paraag conclude that color affects one's mood because of what it does to the body.

With the Sustainable Development Goals (SDGs) at its core, the 2030 Agenda is a transformative political framework designed to eradicate poverty and achieve sustainable development globally. It balances the economic, social, and environmental dimensions of sustainable development, including the key issues of governance and peaceful and inclusive societies, and recognizes the essential interlinkages between its goals and targets, i.e., that they must be implemented as a whole and not selectively. The respective chapters in this volume raise a number of questions regarding corporate social responsibility, ethics, and corporate governance in the face of new technology and new approaches to climate change and sustainability reporting.

Research in Education, 1973 *Student Debt* William Elliott III, Melinda K. Lewis, 2017-01-26. Offering answers to essential questions about student debt and many connected issues, this book examines student debt in the United States at every stage of the process, from the banks that issue the loans to the colleges and universities that collect the payments. Student lending in the United States is one of the most controversial issues in contemporary American discourse. Are these loans the only option for Americans who want to attend college and university in order to attain the best careers and have a productive, enjoyable life? Should the predatory lending practices of for-profit colleges and universities be stopped? How can limits be imposed on student lending amounts without preventing students from getting the education they need to succeed? The book explains why so many students are borrowing large amounts of money to attend college, considers whether the cost of higher education is simply too high, and if there should be a cap on how much money students can borrow. It explains what is contributing to the rising rate of borrowers defaulting on their loans and predicts whether the so-called student loan bubble is in danger of popping. The Data and Documents chapter analyzes data gathered from discussions about student debt. This information enables readers to better understand who is borrowing student loans, what the money from the student loans is going toward, what individuals have the authority to decide who qualifies for these loans, and what is being done to curb wasteful student spending.

Exploring the shortage of professionals in fields such as education, medicine, and law, Fisher analyzes the causes and effects of the student loan debt crisis in America and argues for higher wages, student loan debt forgiveness, and an updated financial model to pay for training for public interest professionals. Supported by economic research and a sociological background, Fisher proposes a path forward that will ease the student loan debt crisis and revitalize the economy.
