

Solving Series and Parallel Circuits Worksheet

Use the examples in your notes to help you solve the unknown values in the following circuits. Don't forget to include units with your answers.

1. State the three mathematical equations for **series circuits** that explain how current, voltage and resistance in one part of the circuit is related to the total current, voltage or resistance (i.e. use V_1 , V_2 for A); I_1 , I_2 for B); and R_1 , R_2 for C)) :

A) $V_T =$ _____ B) $I_T =$ _____

C) $R_T =$ _____

2. What is the voltage of light bulb 1 (V_1)? (show your calculations).

$V_T = 6\text{ V}$ $V_1 =$ _____ $V_2 = 2\text{ V}$

3. What is the total voltage (V_T) for the circuit? What is the current at the resistor (I_1)?

$V_T =$ _____ $V_1 = 3\text{ V}$ $V_2 = 1\text{ V}$
 $I_T = 6\text{ A}$ $I_1 =$ _____ $I_2 = 6\text{ A}$

4. Calculate the total resistance using the information given and your Ohm's Law equations ($R=V/I$). *Hint- you will only need to use V_T as the voltage for the circuit in your calculation.

$V_T = 10\text{ V}$ $V_1 = 6\text{ V}$ $V_2 = 4\text{ V}$
 $I_T = 5\text{ A}$
 $R_T =$ _____

5. Solve for all of the missing values. Use your Ohm's Law equations ($R=V/I$) to solve for resistance.

$V_T =$ _____ $V_1 = 5\text{ V}$ $V_2 = 3\text{ V}$
 $I_T = 2\text{ A}$
 $R_T =$ _____

material which will enable students to gain the skills knowledge and understanding they require This pack will save a course team many hours work preparing handouts and assignments and is freely photocopiable within the purchasing institution The pack includes Exercises to support and develop work in the accompanying student text Planned projects which will enable students to display a wide range of skills and use their own initiative Reference material for use as hand outs Background on running the new HNC HND courses Tutor s notes supporting activities in the students book and resource pack Use of Representations in Reasoning and Problem Solving Lieven Verschaffel,Erik de Corte,Ton de Jong,Jan Elen,2010-09-13 Within an increasingly multimedia focused society the use of external representations in learning teaching and communication has increased dramatically Whether in the classroom university or workplace there is a growing requirement to use and interpret a large variety of external representational forms and tools for knowledge acquisition problem solving and to communicate with others Use of Representations in Reasoning and Problem Solving brings together contributions from some of the world s leading researchers in educational and instructional psychology instructional design and mathematics and science education to document the role which external representations play in our understanding learning and communication Traditional research has focused on the distinction between verbal and non verbal representations and the way they are processed encoded and stored by different cognitive systems The contributions here challenge these research findings and address the ambiguity about how these two cognitive systems interact arguing that the classical distinction between textual and pictorial representations has become less prominent The contributions in this book explore how we can theorise the relationship between processing internal and external representations what perceptual and cognitive restraints can affect the use of external representations how individual differences affect the use of external representations how we can combine external representations to maximise their impact how we can adapt representational tools for individual differences Using empirical research findings to take a fresh look at the processes which take place when learning via external representations this book is essential reading for all those undertaking postgraduate study and research in the fields of educational and instructional psychology instructional design and mathematics and science education Current Perspectives on the Value, Teaching, Learning, and Assessment of Design in STEM Education Jeffrey Buckley,Eva Hartell,Nicolaas Blom,2023-08-25 Design is a central activity within Science Technology Engineering and Mathematics STEM education Within enacted practice design can feature within intended learning outcomes for example in learning to design and it can feature within pedagogical methodologies for example by learning through design Often holding differing disciplinary interpretations such as design as cyclical problem solving iterative design conceptual design or design with or without make understanding the educational merits of the ill defined and open nature of authentic designerly activity is paramount This Research Topic sets out to gain a more nuanced understanding of the value and role s of design within STEM educational contexts This Research Topic focuses on design within STEM educational contexts particularly in terms of teaching learning and assessment The aim is to

contribute to the evidential basis which can be used to guide the incorporation of design into educational practice The topic has two central research objectives The first is to generate evidence regarding what design is in STEM education For example is the ability to design a singular or manifold construct Is the capacity to design or are factors of this ability both learnable and teachable How transferable is designerly knowledge between contexts How do different disciplinary contexts influence the interpretation of design The second is to further our understanding of how best to incorporate design within STEM education contexts For example how much emphasis should be placed on learning to or through design in school How should design be assessed within formal education Where and when is design best incorporated into education In posing these questions the goal of this research topic is to provide scholarly discourse which supports critical reflection and the challenging of assumptions regarding design in education
