Chemical Engineering Progress, 2009

Advanced Physicochemical Treatment Processes Lawrence K. Wang, Yung-Tse Hung, Nazih K. Shammass, 2007-11-10 The past thirty years have witnessed a growing worldwide desire that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken

Introduction To Coastal Engineering And Management (Third Edition) J William Kamphuis, 2020-05-29 This book is based on the author's 49 years of experience as a practicing coastal engineer and 34 years as professor of coastal engineering and management at Queen's University The book is therefore thoroughly practical in nature but it also reflects newly relevant issues such as consequences of failure impacts of rising sea levels aging infrastructure real estate development and contemporary decision making design and education This textbook is useful for undergraduate students postgraduate students and practicing engineers It covers waves structures sediment movement coastal management and contemporary coastal design and decision making It presents both basic principles and engineering solutions It discusses the traditional methods of analysis and synthesis design but also contemporary design methodologies such as working with environmental impacts The second edition expanded greatly on the topics of failure and resilience that surfaced as a result of recent disasters from hurricane surges and tsunamis It updated the discussion of design and decision making for the 21st century with many new examples This third edition develops some of these topics further but its largest new change is the chapter on climate change This chapter presents the basics of climate change and then goes on to stress the practical implications of the impacts of climate change focusing on what is of importance to coastal and fluvial specialists
