evolution and the way animals internalize and engage with the contextual properties of their world that are meaningful for them The core argument is that a context which is subjective and comprised of the perceptual capacities offers new insights into the evolution of mind Rather than seeing biological evolution in terms of the emergence of mindless forms and cultural evolution as the emergence of disembodied minds the book seeks to integrate these two perspectives through the rigorous mapping of contexts Key Features Reveals an understanding of animal minds Formulates a hypothesis for the evolution of consciousness Includes a discussion of the origin of technological innovation Provides a rationale for the ecology of mind Proposes a theory of the evolution of language Outlines the science of experience and how it influences choice Explains the role of context and choice with respect especially to human ecology
